

SUBSCRIPTION AND PURCHASE INSTRUCTIONS FOR THE NEW AIG TOKEN

AIG

Ladies and Gentlemen,

Welcome to this Wednesday gathering of blockchain—a veritable feast. Today’s stage is neither the trading floor of Wall Street nor a technology summit in Silicon Valley, but rather the decentralized world on-chain, where the subscription carnival for the new AIG token STO is igniting the enthusiasm of investors everywhere.

You may ask: how is this different from a traditional IPO?

Let me put it plainly: in the past, subscribing to a new issue was much like opening a mystery box—you committed capital, but had to wait for the market’s first bell to learn the outcome. That anxious waiting was not unlike the early American farmer burying seed in the soil, waiting on weather, rain, and harvest.

Today, however, the STO offers something altogether different: a process that is transparent and observable, with real-time dynamics recorded on-chain. You are not a passive spectator; you are an active participant—able to watch, with your own eyes, how capital moves and how the market itself breathes.

We now hold in our hands the formidable tool of blockchain technology—together with a process that is fully visible.

We can observe how each fluctuation in transaction volume shapes the subscription of this new token; how every movement in price leaves its trace. Like the shrewd merchant of old, we are invited to act not on impulse, but with data and discernment—using judgment to seize opportunity.

This is a new experience altogether. It is as if one were stepping from an era where investing relied solely on intuition into an era where every data point and every transaction is laid open in real time. You are no longer blind to information—you are in command of it. You no longer place your faith in chance—you rely on analysis. You are no longer at the mercy of fate—you stand as master of your own capital.

And so, guys, I extend the invitation once more: come and witness with me how our projections for the AIG token are transformed into tangible reality. We are no longer following blindly—we are seeing clearly. That, in truth, is the revolutionary shift.

The Wednesday carnival is not fireworks against a holiday sky; it is the starting line of a marathon in wealth.

It brings both exhilaration and responsibility. It allows you to see expectations fulfilled, while making you part of the unfolding story. It is not unlike the opening moment of a basketball game, when the crowd calls out, "The game has begun—are you stepping onto the court?"

Later this afternoon, the Fed will release the minutes of its July meeting, accompanied by remarks from several officials. This has already cast a cautious shadow over the equity markets, with index futures softening in pre-market trading—an early signal of how significant these minutes may prove to be.

Investors are watching closely for a dovish tone; should the minutes lean hawkish, the market is likely to retreat further.

For us, however, the effect is minimal. Our quantitative portfolio has already been optimized, with equity allocations intentionally reduced in the near term. This is consistent with my long-standing

view: that from mid-to-late August through the end of September, the market would undergo a period of correction.

Will the Fed cut rates in September?

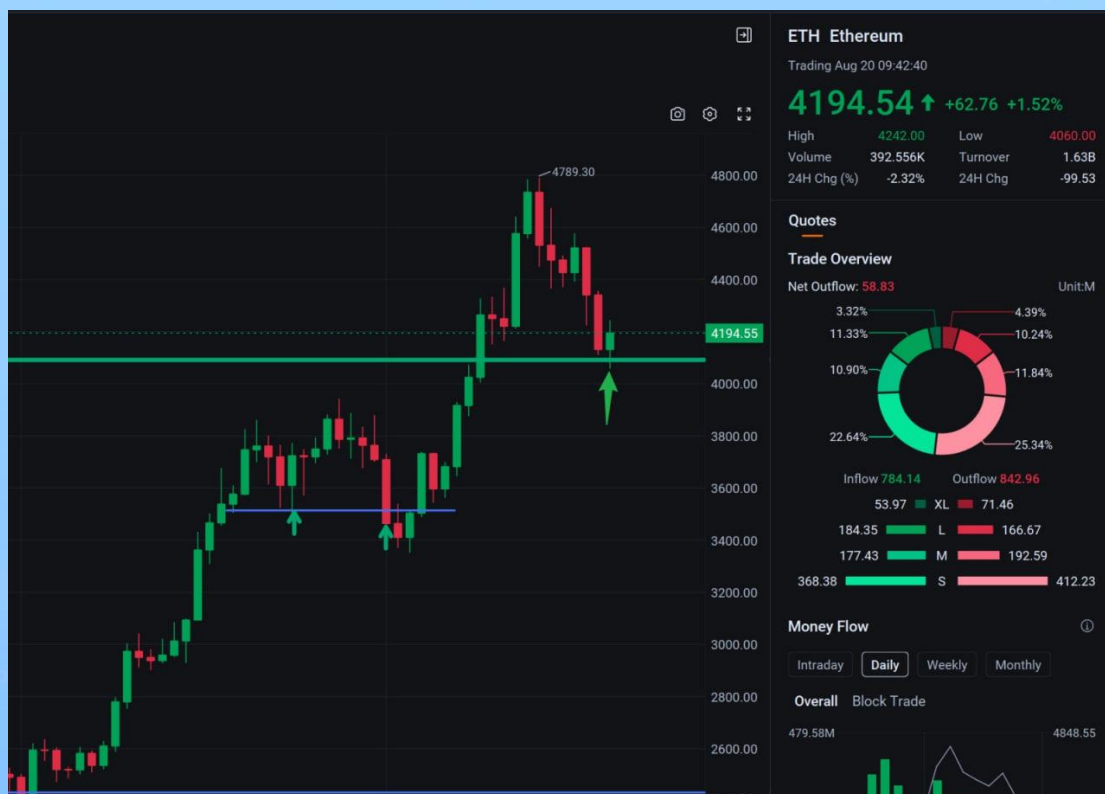

This week, the global financial markets are bracing for what many see as a “storm-level” event—the Jackson Hole Economic Policy Symposium. Often described as the “Davos for central bankers,” this annual gathering will take place in Wyoming from August 21 to 23. The moment of greatest attention will arrive on Friday at 10 a.m., when Fed Chair Jerome Powell delivers his remarks. Each of

Powell's appearances has the potential to serve as a starting gun for a shift in market direction, and this year's symposium has become a critical inflection point for investors worldwide.

At present, expectations for a rate cut in September are at their highest level in years. Some institutions are even wagering on the possibility of a 50-basis-point reduction.

Looking back, the 2024 Jackson Hole Symposium—held August 22 to 24 under the auspices of the Kansas City Fed—provides a telling precedent. Powell's keynote speech at the time acknowledged the state of the U.S. economy and signaled that “it was time to adjust policy,” though the pace of that adjustment remained uncertain.

The outcome was clear enough: the Fed turned hawkish once more, financial conditions tightened sharply, and equities entered a period of decline that lasted until the rate cut on September 18.

The September 2025 rate cut will not be an exception. It is the product of multiple converging pressures.

Whether driven by the policy imperatives of the Trump administration or by the mounting burden of interest payments on U.S. debt, the market is clearly in need of a decisive rate reduction —one sharp enough to quench its thirst.

Turning to the cryptocurrency markets, we can already observe a stabilization. ETH, for instance, has found firm support around the 4,100 level and has begun to rebound. The recent string of declines was shaped in part by this week's dense calendar of events and

data releases, and in part by short-term profit-takers eager to lock in gains, which accelerated the selloff. Yet for those committed to longer-term allocation, and for those who understand the implications of a September rate cut, these dislocations present opportunity. Such opportunity is not contingent on sentiment; it exists as an objective fact.

Which is why today remains a prudent moment to continue accumulating digital assets. Whether one chooses BTC, ETH, or Token NQT, this process forms part of a broader contest—one that culminates on August 31.

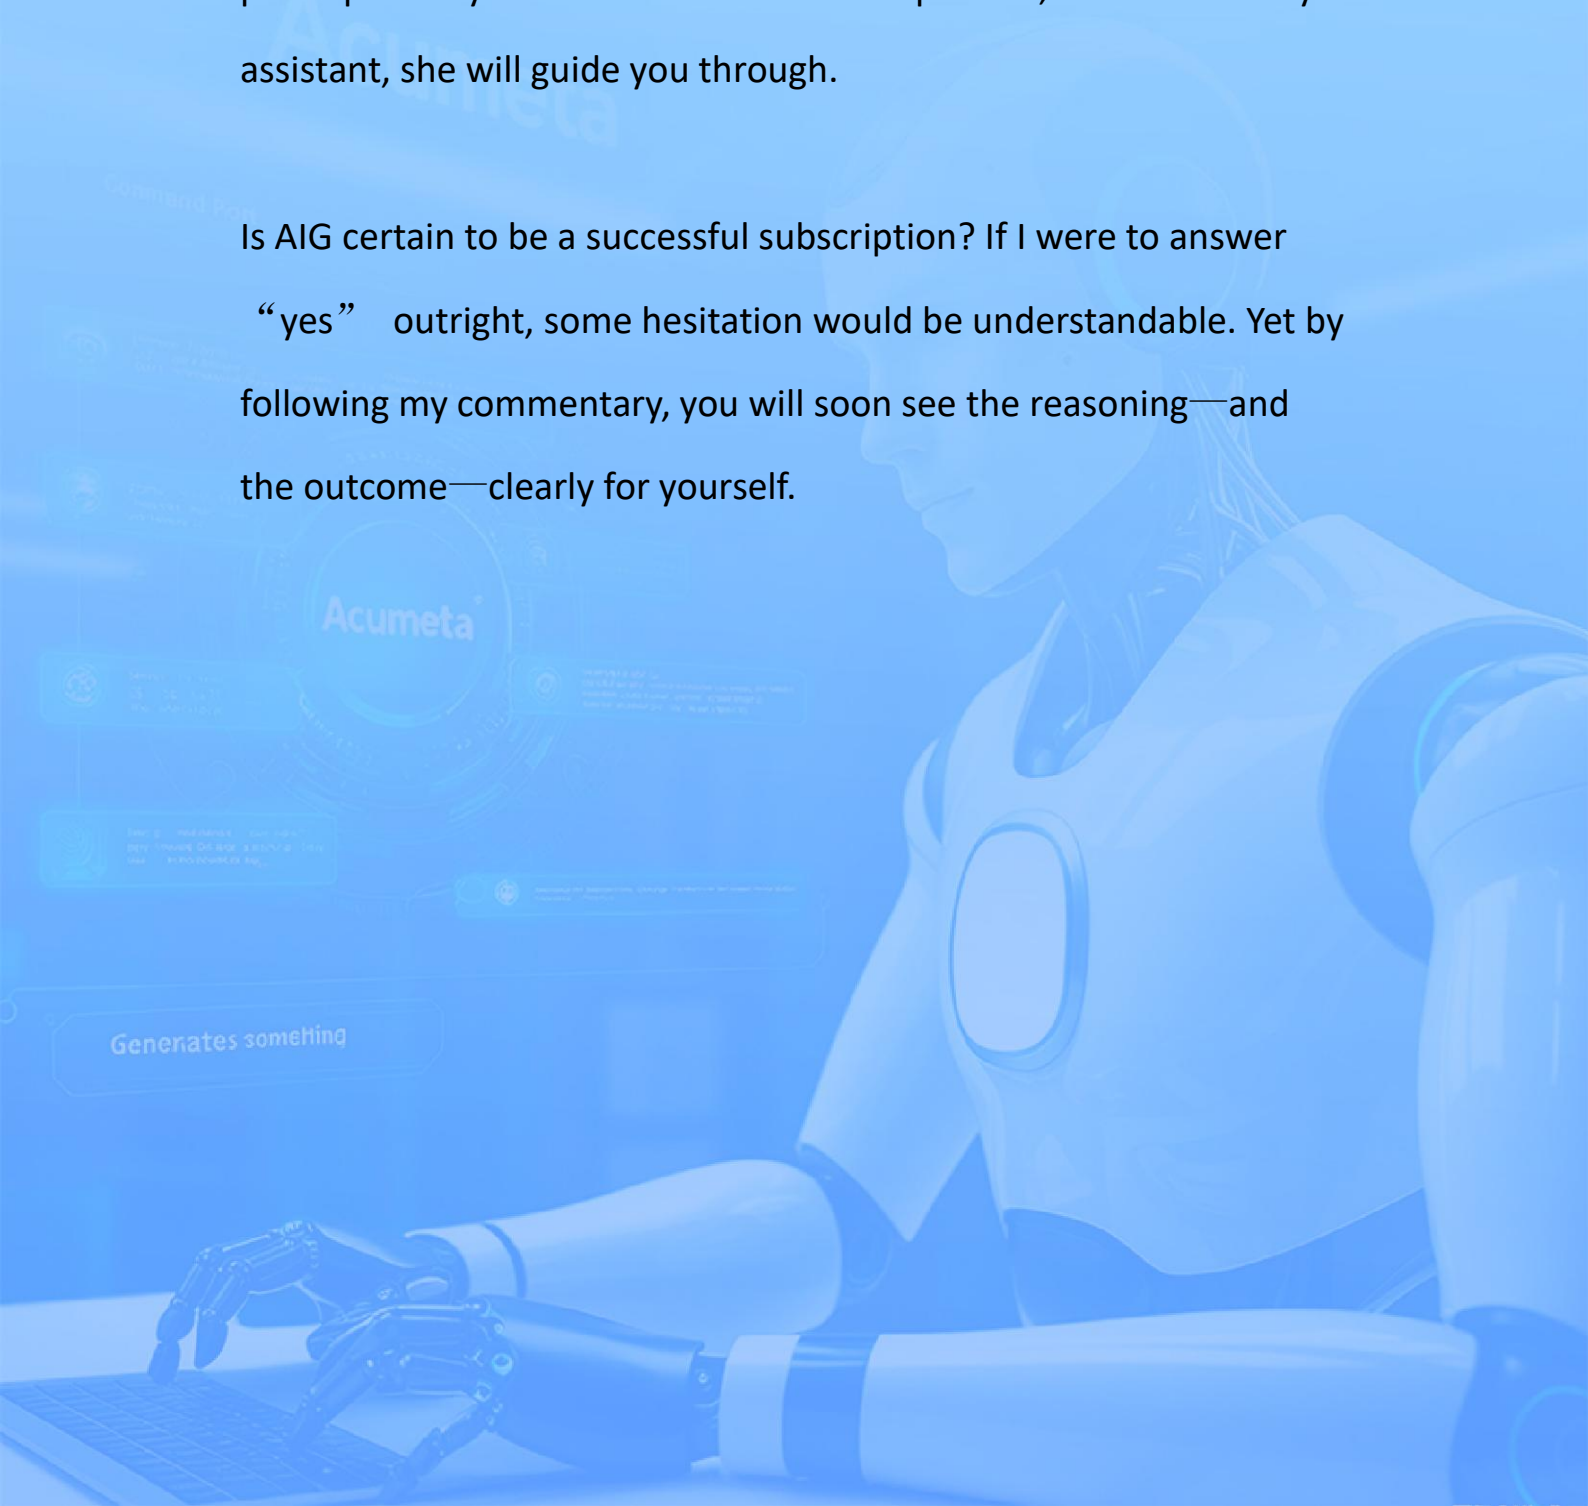

Since the Federal Reserve's formal announcement of a rate cut will not arrive for another month, it is inevitable that we will encounter bouts of volatility in the meantime.

The question, then, is how best to navigate such turbulence.

The answer lies in seeking the most stable course of action—namely, participation in the subscription of the newly issued AIG token.

Come on, guys! Wednesday, the subscription window officially opened. Do you know how to take part? Simply log into your INDEXBIT Exchange account, select the “STO” section, and you will find the subscription page. With the 800 USDC in pledged funds you have already secured, you can meet the minimum threshold to participate. If you are unfamiliar with the process, reach out to my assistant, she will guide you through.

Is AIG certain to be a successful subscription? If I were to answer “yes” outright, some hesitation would be understandable. Yet by following my commentary, you will soon see the reasoning—and the outcome—clearly for yourself.

HTFL 30.515 -0.155 -0.51%

Chart Options Financials Valuation Corporate Actions

Indicators   VS  

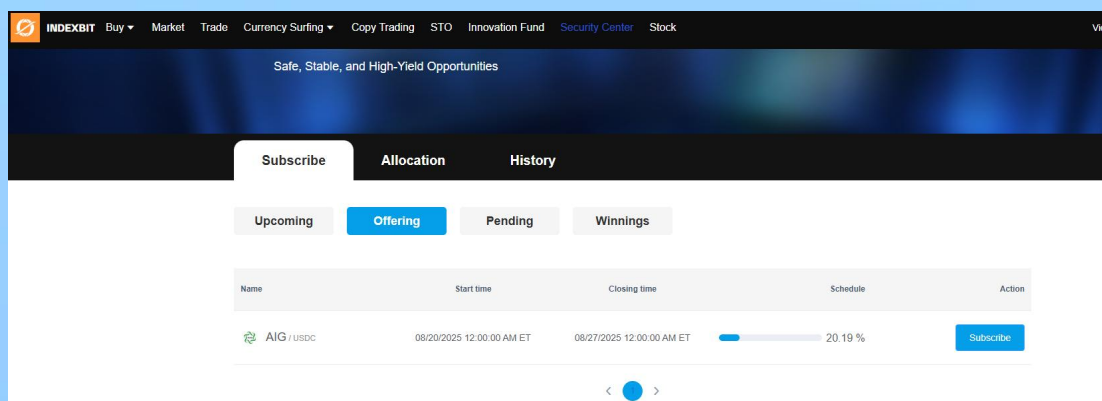

To draw a clearer comparison, let's look at a representative case from the equity markets and consider whether the AIG token might see a similarly compelling subscription demand.

As the chart indicates, earlier this month on August 8, HTFL—an IPO built on the same premise of combining AI+gene therapy solutions, much like the AIG token—came to market. Priced at \$19 per share, HTFL opened its first trading session at \$28, climbing intraday to as high as \$36.60.

From this example in U.S. equities, one can see plainly how the market validated the project's proposition. It demonstrates both the capital market's conviction in the AI+genomics trend and the intensity of investor appetite. The outcome was a return exceeding 100% on the first day alone.

The question that follows, naturally, is whether the AIG token will surpass this benchmark.

Generates something

The answer is yes—absolutely. But let me be clear: this is not blind optimism speaking.

Take a look at the subscription progress chart following the launch of the new AIG token.

First, it's important to understand what this chart actually represents, and why it matters.

Put simply, the chart consolidates all subscription activity into a single view, giving you a direct picture of how much market capital is competing for allocations in AIG.

Every successful subscription is recorded here, so the chart reflects real-time market appetite and momentum.

For example, if you now see the AIG subscription progress at 20%, what does that mean? It means that out of the total 240 million tokens offered in the STO, 48 million have already been subscribed. That's equivalent to 24 million USDC that has already been committed.

In essence, this is not just data—it is a signal of both demand and capital inflow. Do you see the significance?

At the same time, this functions as a timeline. As the days progress, you will notice a steady inflow of capital into the subscription, with allocations being raised accordingly. The first decisive milestone is reached once the subscription achieves full capacity—100%.

This moment marks a turning point: the entire issuance of 240 million AIG tokens has been fully subscribed, backed by an inflow of precisely 120 million USDC.

But does this signify the end of the subscription process? Clearly not. The subscription reflects market demand—much like an

auction. As long as participants remain willing to commit additional capital, the competition will continue to drive allocations upward.

That said, unlike speculative auctions that often spiral into inflated pricing, the AIG subscription is structured to maintain equilibrium.

What you will observe is not reckless escalation, but a sustained increase in both capital inflows and subscription volume.

When the subscription surpasses 200%, it signals a critical reality: the aggregate demand for allocations now exceeds the available supply, making it impossible for every participant to secure a one-to-one allocation in the final distribution.

And why is that?

Here, it is worth clarifying a key point regarding how allocations are determined in a new token STO project.

According to the official allocation rules of the new token subscription program on INDEXBIT Cryptocurrency Exchange:

1. Priority of subscription time.

This means that the earlier you subscribe, the greater your allocation weight becomes.

2. Finite subscription share principle.

The larger your subscription amount within the same time frame, the higher your allocation weight proportion will be.

The second principle echoes practices familiar from equity markets. You may recall that your previous allocation in FIG/BLSH was largely the result of distribution pushed to you by your broker.

This time, however, the allocation is governed directly by the official AI-driven weighting system of the INDEXBIT Exchange. The final outcome will be revealed on the official allocation announcement date.

How should we understand the concept of weighted lottery allocation?

The term “weighted lottery allocation” may sound technical, but its core principle is straightforward: the more you contribute, the greater your chances of success.

Suppose a community decides to distribute “gift packages” to its most active members on the eve of Thanksgiving. Instead of conducting a random lottery, they adopt a “weighted proportion allocation” method.

The community sets several metrics to assess contributions and assigns different weights:

Basic participation weight: As long as you participate in this activity, everyone receives 1 basic weight.

Content Contribution Weight: If you post high-quality content on the community forum, each post earns you 2 additional weights.

Activity Weight: If you log in to the community daily and engage actively, you earn 5 additional weights.

Volunteer Weight: If you become a community volunteer and contribute to community activities, you earn 10 additional weights.

Amy: She is a community volunteer and has also actively posted 2 posts and interacted. Her total weight is: 1 (base) + 2 (posts) \times 2 + 5 (activity) + 10 (volunteer) = 20.

When distributing gift packages through the “lottery,” Amy has the highest chance of receiving a gift package because she has the highest weight.

Thus, we understand that in a new token STO project, allocation is not egalitarian. Rather, the earlier you subscribe, and the larger your subscription, the greater the weight of your allocation. Do you see the principle?

When you participate in the AIG token subscription today, your objective is precisely to secure this premium first-mover experience.

Even if your 800 USDC is not a large sum, from the perspective of experience, you pay little in cost yet gain a significant enrichment of knowledge and insight.

Should you wish for greater returns, it follows that larger capital commitments are required—only then can one secure a proportionally greater share of potential profits.

Nevertheless, your 800 USDC already signals your participation and your eligibility for allocation, provided you act promptly today. Have you taken action? Have you subscribed?

No way—you still haven't redeemed your token vouchers?

Folks, seize the moment and accelerate the redemption of any remaining vouchers during Wednesday's redemption carnival.

Once all your NQT tokens have been redeemed, you should immediately stake them to secure 800 USDC. This represents a significant opportunity to participate in this special carnival event.

Why act quickly today?

Because you want to claim the earliest possible position in the AIG token subscription. You are vying for a pivotal moment—one that can materially enhance your allocation weight.

Much like the wealth accrued over a lifetime through disciplined attention to time, now is the moment to act decisively. Do you wish to be among the first movers? Your action today is the very step toward tangible results, isn't it?

Reflecting on my analysis from Tuesday, will the AIG token ultimately reach its industry valuation target of \$1 – 1.5 billion?

Starting today, your focus should be precisely there—on the visualized progress chart for the AIG token. Every day, every moment, the data shifts, reflecting the different flows of capital entering at different times.

And these funds aren't limited to North America alone—they come from blockchain participants around the globe. As long as you hold an account with INDEXBIT Cryptocurrency Exchange, and your account contains BTC/ETH/USDC, you are eligible to participate in the AIG token subscription.

This is the profound advantage of the blockchain revolution.

A moment of thrilling verification is upon us. Based on valuations, the AIG subscription chart is expected to reach 300 – 500% by the close of the subscription period. Looking at the first day, it's clear there's still some distance to cover—but time is a patient rose, destined to bloom with astonishing fragrance. Don't you agree, guys?

Generates something

STAKING FUNDS

EXCLUSIVE USAGE INSTRUCTIONS

Folks, once we have the visualized progress chart for the AIG token subscription—much like seeing the speedometer while driving—this tangible sense of insight gives us a psychological expectation for each day that follows.

This expectation, on one hand, brings a sense of reassurance; on the other, it grants us the flexibility to make strategic choices.

This is progress in the crypto world, and more importantly, it reflects the spirit of transparency and openness inherent in blockchain technology.

Today, all participants in the carnival are taking the first step: establishing staked financing. By leveraging your experiential participation in the token STO, you're able to actively engage in the process.

This hands-on involvement not only provides a satisfying sense of participation but also deepens your understanding of a crucial principle for enhancing wealth—making informed choices. Do you appreciate that?

Remember: prioritizing the timing in the AIG token subscription is the single most important action for you this Wednesday.

Ladies and gentlemen,

Focus your attention right here—because we’ve arrived at the most exhilarating moment of the program, a moment that can make your heart race and, yes, even get your wallet “dancing.”

I’m hearing that the AIG token STO project now stands at a critical, time-priority juncture.

Folks, this isn’t an ordinary moment; it’s akin to those final ten seconds on the countdown before the moon landing. Miss it, and you miss history in motion.

But what’s even more significant is that the funds secured through staked financing are actively honoring our steadfast principles: compensation-backed validation and the safety guidance of our quantitative strategies.

This is the era we are living in—a time that truly redefines how we think. I extend the invitation once again: if you haven't yet received a token voucher, it doesn't matter.

You can still participate directly in the AIG token subscription. This opportunity isn't reserved solely for those who hold vouchers; it belongs to anyone with foresight and the courage to act.

See you this afternoon!

TOKEN VALUE AND STORAGE

Folks of the carnival, pioneers in the AIG subscription:

On Wednesday afternoon, the crypto world staged a sudden and forceful rebound. BTC lifted its head, while ETH—like a long-absent prizefighter—landed a clean, resounding straight punch in the ring. And I must ask you: did you seize that fleeting moment to buy the dip?

At 4,100, I reminded you once again—that was a point worth noting, much like securing a position in a basketball game, waiting for that decisive rebound that can turn the tide.

Let us not forget: what propelled this surge was not merely the spontaneous rhythm of the market, but also the release of the Federal Reserve’s minutes. That document pulled back the curtain on the eve of rate cuts, allowing investors to glimpse where capital might next flow. A rate cut is akin to lacing the market with lighter running shoes—money runs faster, assets leap higher. This is not coincidence; it is a pattern.

In Texas, there is a farmer who, before every planting season, keeps

his eyes on the weather.

He says, “You cannot control when the rain will fall, but you can decide when to place the seed in the ground.”

Isn't investing much the same? We cannot dictate every word spoken by the Fed, but we can choose to sow our capital when the market presents a low point. Because when sunlight and rain finally arrive together, that is the moment when others look on with envy as you harvest.

Do you see where wealth is beginning to gather? It is flowing out of the conservative, outdated realms of traditional assets, and into the energetic, innovative, and high-potential world of cryptocurrency. This is not merely a short-term rebound—it is the beginning of a long-term trend.

Today's crypto market embodies such a moment. The powerful rebound this afternoon is more than just numbers on a chart; it is a signal, a guidepost pointing us toward the future.

What exactly are the Fed's meeting minutes?

In essence, they are a “playback of the discussion” —a record that captures how policymakers are thinking and where they stand when it comes to interest rates, inflation, employment, and economic growth. Much like when a company holds a board meeting and the secretary compiles a set of “discussion points and management attitudes,” the minutes may not hand you the final decision, but they reveal the reasoning behind it.

Generates something

Investors and markets scrutinize these minutes because they often hint at the direction ahead. They serve as a kind of barometer for interpreting the Fed's “next move.”

Take June 2024, for example: while no immediate rate cut was announced, several officials noted that they were “seeing signs of easing inflation.” The market swiftly translated that into “a rate cut by year’s end is possible.” The result? Treasury yields fell, and both the Nasdaq and BTC prices climbed.

If you treat the Fed’s minutes as a “compass for market sentiment,” you’ll find it much easier to anticipate where the next wave might carry us.

The minutes released on Wednesday afternoon reflect the Fed’s July 30 – 31 meeting.

From these minutes, several key points can be drawn:

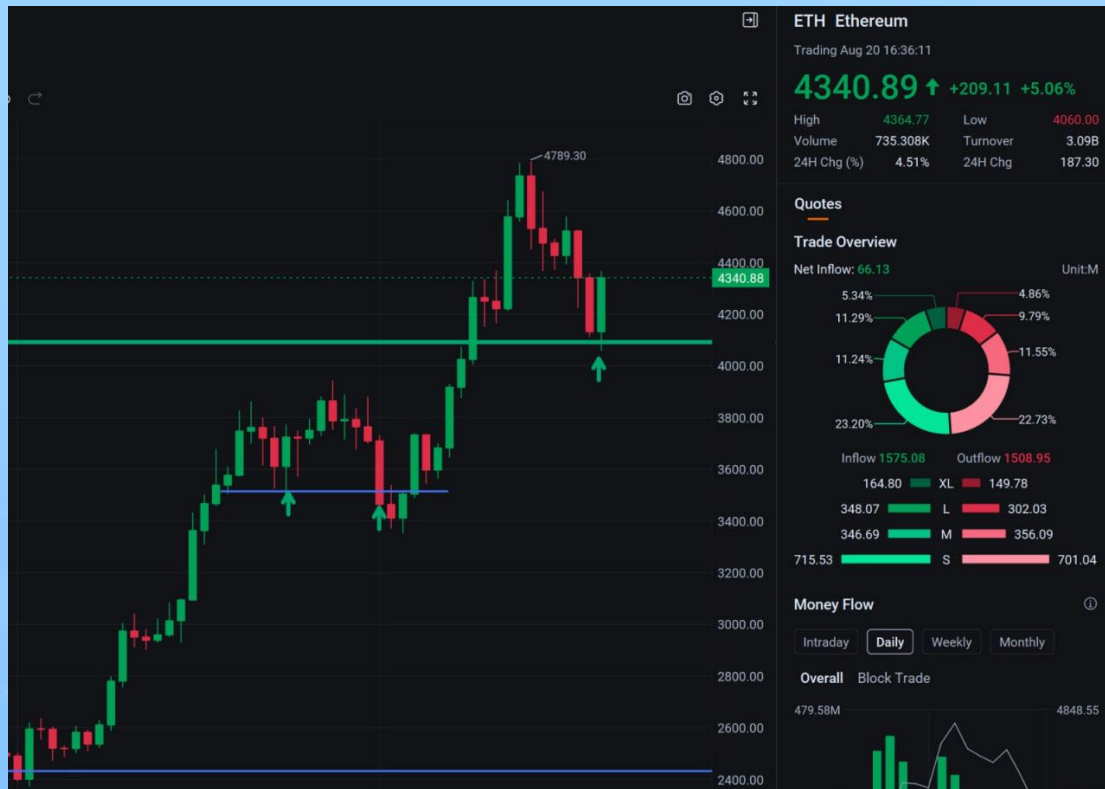

Participating officials agreed that holding rates steady prior to the meeting was appropriate. However, an unexpected nonfarm payroll report released on August 1 significantly increased the likelihood of a rate cut in September.

&& The term stablecoin was mentioned eight times. Governor Waller called for embracing artificial intelligence and stablecoins as part of a “technology-driven revolution” to help invigorate the U.S. economy. The discussion extended to tokenization in the payments sector, as well as applications of smart contracts and AI.

&& The importance of the Stablecoin “Genius Act” was acknowledged, alongside debate over how stablecoins could expand demand for U.S. Treasuries and other backing assets.

&& Some officials hinted at support for a rate cut during the upcoming September 16 – 17 FOMC meeting.

Taken together, these points suggest that the Fed is not only signaling openness to the development of stablecoins but is also exploring broader support for cryptocurrency and tokenization in payment systems. A September rate cut now appears increasingly certain.

Since we understand that the Fed’ s minutes play a critical role in shaping investment forecasts, we must also recognize that we now stand within a pivotal golden age for crypto.

Whether it is congressional backing, executive orders under the Trump administration, the SEC’ s “super app,” or the supportive remarks from certain Fed officials regarding cryptocurrency holdings and the role of stablecoins—each points to a momentum that is unmistakably aligned with digital finance.

Is this not a great display of American leadership in action?

Does it not reflect the confident, forward-looking spirit of

blockchain innovation in the United States?

And what are we doing in response? A month ago, I called for—and initiated—the “Win the Race for Reserve Digital Token Challenge.”

This competition runs through August 31, with the top five community members by reserve volume set to become the inaugural global ambassadors for Acumeta. Do you remember?

Now, let ‘s look at the present. The Token Redemption Carnival on Wednesday has been timed and staged under highly favorable conditions.

Today, you received the token NQT.

As you watch its price rise—are you pleased?

As the chart shows, the current price has already moved above 1.2 USDC, and the token's market capitalization continues to climb. This sustained momentum has been fueled by institutional recognition in the market and by the global attention drawn to the Token Carnival.

Indeed, within the INDEXBIT Cryptocurrency Exchange, we witnessed an event both exhilarating and affirming—one that has brought immense pride to me and to my team at the Quantitative Think Tank Center. Every effort, every commitment we made, has proven worthwhile.

Folks, have you received the very gift we promised from the beginning?

I encourage you to hold NQT for the long term—for I hope you may become the next Buffett.

We all know that Mr. Buffett purchased Coca-Cola shares early on, and then, over the years, consistently spoke about Coca-Cola in countless settings. In the end, his persistence was rewarded with remarkable returns on that investment.

And what about you? Don't get the order wrong—I hope today you have secured the token NQT. From there, through our quantitative strategy enterprise, you continue to validate its strength, helping us build a reputation grounded in positive results and genuine beneficiaries, while conveying our brand's value to the broader market.

In time, the token's rising price and growing market capitalization will bring you the kind of substantial reward you deserve.

That is my expectation—and my vision. You will achieve it, won't you, guys?

With the September rate cut now all but certain, the token's price is poised to break through 3 USDC. Will you let that moment slip by? I know you won't. You will continue to follow alongside us.

When it comes to the INDEXBIT Cryptocurrency Exchange, have its services and trading experience won your confidence?

This exchange offers a comprehensive suite of capabilities—ranging from token trading, custody, and currency "surfing," to innovative investment funds, STO subscriptions for new tokens, smart-follow systems, and P2P merchant networks built on reputational trust.

What I hope is that you, alongside me, will continue to test and affirm the long-term value of these services. From past data, I know

that few exchanges deliver at this level of quality. Yet here, with more than \$200 million worth of my own tokens actively operating, I have experienced both security and reliability.

This assurance is further reinforced by the exchange's MSB license, its transparent asset reserves, its participation in the SEC's "super app" initiative, and the anchoring of settlements and transactions to USDC under the Stablecoin Act. Together, these represent a new benchmark of compliance—one that should give you full confidence in your participation.

And should any questions remain, you may always reach out to the exchange's official support manager for direct assistance.

Well, holding and reserving my Quantitative Think Tank Center token, NQT, is not merely an act of investment—it is a statement of long-term conviction, a model of progressive ownership.

I hope that when the token appreciates to 5 USDC, 6 USDC, or even 10 USDC, you will still stand as one of our valued members—

witnessing Acumeta's global debut and partaking in its true services and experiences.

Along this journey, your capital has the potential to multiply several times over. Such exponential growth, however, cannot be sustained without a foundation of disciplined and efficient investment strategy. The question, then, is how I intend to guide you toward that outcome.

First, by discerning the underlying trajectory of the U.S. economy. Second, by constructing an optimized portfolio allocation—making the right moves at the right junctures.

For example, as we speak, we are assembling a high-quality investment initiative [subscription AIG token].

Have you taken part?

Over the past three days, our carnival has been nothing short of a success.

*Time and again throughout the program, we highlighted the

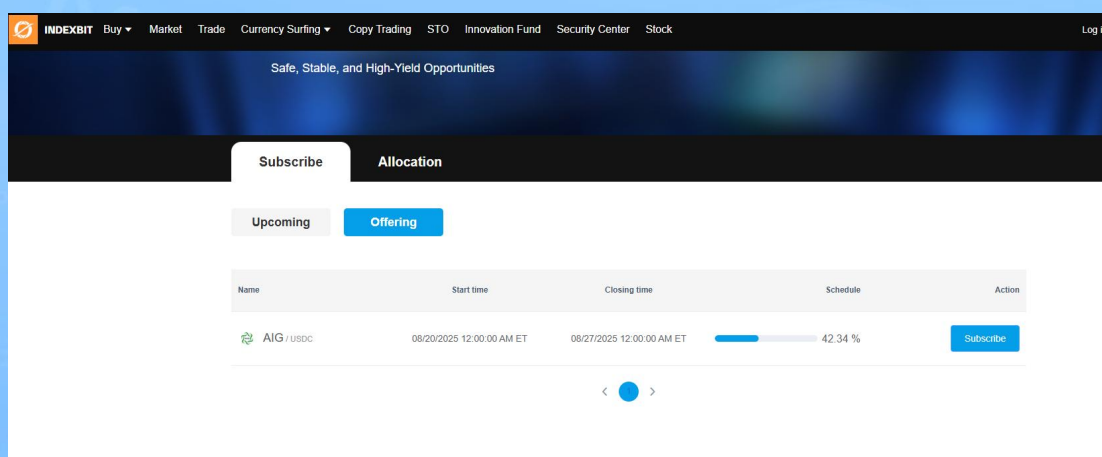

reliability and long-term promise of the AIG token STO project and its practical value.*

You know this: when the Fed itself steps forward to endorse tokenization, to support artificial intelligence, and to recognize technology as a driver of the economy, such momentum signals more than a passing trend. It represents a shift that strengthens America's role as a global leader and model for innovation.

Today, the convergence of AI and genetic medicine is moving forward with conviction—bringing patients access to faster, more precise, and more affordable healthcare. That is the very heart of this project.

By choosing to support it, subscribe to it, and stay engaged with it, you are aligning with a future that is being built in real time. Even if your current stake—say, 800 USDC—feels modest, it functions like a spark in the night: a signal that lights the way ahead, a green light for your wealth on-chain. In time, your portfolio may shift from the traditional realm into blockchain-based stores of value—whether that means multiple BTC, ETH, token NQT, or simply more USDC.

You are moving with the tide of a powerful trend, and you stand in a position of advantage. You will have every reason to feel proud of your decision, guys.

Of course, the hopes and expectations I hold in my heart are important—but the needs of the capital markets must be expressed through tangible, visualized data.

Let's turn our attention to the afternoon's subscription dashboard for the AIG token. As the chart shows:

As of now, the figures have surpassed 40%. What does this signify?

It indicates that 96 million AIG tokens have already been subscribed, representing an inflow of 48 million USDC. Yes, you read that

correctly. Compared to this morning, we can now clearly observe both the sustained inflow of capital and the growing market demand for this new token. Following this trend, I anticipate that subscription figures will continue to climb as the day progresses.

Remember, the cryptocurrency market operates 24/7. Even when North America sleeps, participants across other regions remain active. This new token STO project is by no means limited to North America—it is a global opportunity.

Have you completed your subscription to the AIG token with your staked financing funds today?

Congratulations. By participating in this remarkable token acquisition initiative, you are engaging with a blockchain-based service that is far more transparent than typical new stock subscriptions.

You can clearly track when the subscription started, when it concludes, and monitor the flow of capital throughout the process.

Moreover, you have the opportunity to participate multiple times—leveraging your own understanding and judgment of the market.

During my program, the first step you will want to take is securing 800 USDC through token-staked financing.

This portion represents a short-term borrowing mechanism, backed by the collateral of your continually appreciating NQT tokens in your account.

So, will you be grateful for the opportunity we provide?

Why is it so straightforward to secure funding through staking?

1. Because INDEXBIT Crypto Exchange launched this initiative to celebrate our Token Redemption Carnival, providing market trading support while simultaneously enhancing the exchange's visibility and service standards.
2. It demonstrates that our token has sustained active trading and stable performance over the years, earning recognition from the

market and institutional backing. This credibility means that whoever holds the token in their exchange account is granted the right to access staked financing.

3. The 800 USDC received through this staking mechanism is interest-free and specifically intended for investment in the AIG token STO project. Once the new token is listed, you will need to return these funds promptly.

4. Naturally, any profits you generate from the AIG token STO project belong entirely to you—you are free to withdraw or circulate them as you wish.

This, then, is the true purpose of the 800 USDC obtained through this staked financing activity. The exchange aims to leverage this initiative to enhance its new token STO issuance services and attract more high-quality clients. Do you understand?

If you missed redeeming your token vouchers over the past two days due to work, today is the day—make sure you claim them!

These vouchers are rewards for the small tasks you’ ve completed within the community over quite a long period. Today is the moment to convert them. The vouchers have expiration dates, so don’ t wait until they lapse and regret it later.

Of course, if you’ ve just joined and don’ t have many vouchers—or none at all—you can seek assistance from my aides. On this exhilarating redemption carnival day, delightful gift packages are everywhere. The key is to find investments that are meaningful and valuable. Reach out to my aides to get guidance and join the New AIG Token Subscription Initiative.

Ladies and gentlemen, thank you for engaging with the content of my session.

Our Token Redemption Carnival week is now reaching its most exhilarating moment! And the AIG new token subscription—my goodness—it’ s like a shot of adrenaline, cranking excitement all the way up! It’ s like the last ten seconds of the Super Bowl, your team has a chance at the game-winning play, and we’ re right there on

the sidelines, witnessing the miracle unfold.

I propose we raise a glass tonight in advance, to toast the full and prosperous returns of our AIG subscription initiative! This isn't blind optimism—it's a conviction, a faith in our own discernment.

I know some of you may feel anxious. After completing the subscription, we enter a waiting period.

It's like putting a perfectly roasted turkey into the oven and sitting there, staring at it, yet able to do nothing.

It's a test of patience—I understand that! But I hope you remember one story, a story about patience and foresight.

During the gold rush, there was a young man named Jimmy. Unlike the others, he didn't frantically dig for gold; instead, he discovered a way to predict where gold would be found. He watched the flow of the river, studied the shapes of the stones, and relied on his intellect rather than brute force to locate the treasure. He spent countless hours waiting, observing, and recording.

Everyone mocked him, saying he was too slow. Yet in the end, he discovered a massive gold mine, while the frantic ones walked away empty-handed.

What we are doing now mirrors Jimmy's approach. We have already planted this golden seed; we have made all the right choices. Now, all that remains is to wait. Patience, after all, is the rarest luxury of our time.

During this period of waiting, there's no need for blind action. We have our subscription progress chart—our silent angel. It reveals every movement of capital, showing us how many others, like us, have chosen this path of wisdom.

Do not be anxious, do not panic. Celebrate the correct decisions we've already made. Savor this waiting period. Trust that the seed we've planted will, in time, blossom and bear fruit. When Thursday returns, tell me—did you pop the champagne? Wishing you a truly splendid evening. See you.
