

Leaders of the AIG token subscription, future winners of on-chain wealth:

On Wednesday morning, Wall Street served us a ‘cold appetizer’—equities slipping in pre-market trading. For many, seeing that red curve was like starting the day with a sip of coffee laced with salt, distinctly unpleasant.

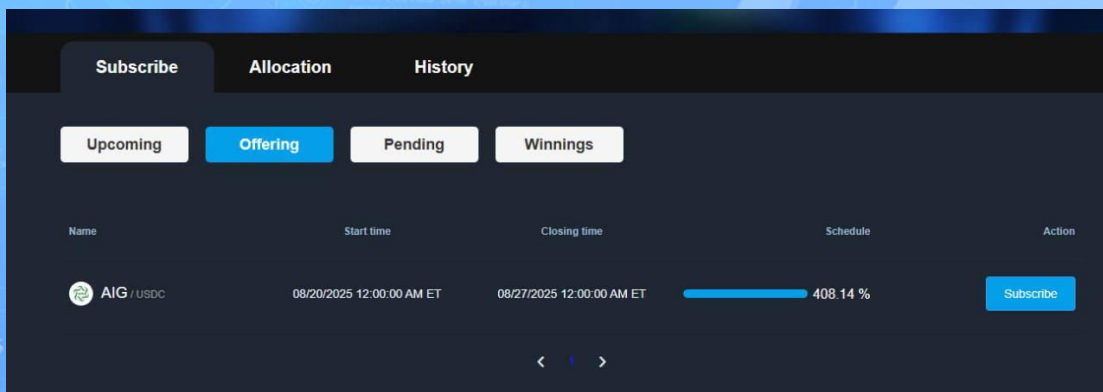

But let us not forget, Nvidia’ s earnings will be released after the bell. That is nothing short of a market suspense drama, with tension so high it makes investors’ palms sweat. As one observer put it, ‘Nvidia’ s earnings are the World Cup final of the tech world—the

outcome of this single match could reverse everything.’ That is no exaggeration, for what hangs in the balance is not only semiconductors, but also the future trajectory of AI, cloud computing, and even the texture of our daily lives.

Meanwhile, space stocks are laughing.

Yesterday, Starship completed its tenth successful launch. This is no sideshow, it is humanity once again ‘breaking through the skies.’

To borrow a favorite line of ours: ‘The sky is no longer the limit; space is the new frontier.’ This technological celebration not only ignited investor enthusiasm, but served as a torch in a cold market, allowing everyone to glimpse the light of the future once again.

\*Meanwhile, our own stage has been anything but quiet. The AIG new token project announced exhilarating subscription results, like

opening a large umbrella in the drizzle of the equity market, or even igniting a burst of colorful fireworks.\*

\*Some may still be preoccupied with the ups and downs of traditional equities, but the rhythm of the crypto market is more like a jazz ensemble: spontaneous, improvisational, yet always able to discover a new melody.\*

\*So the question arises: what comes next?\*

\*The rate-cutting cycle has long since become market consensus, and everyone understands that liquidity will move from a clenched fist to an open hand. In such an environment of release, traditional assets may waver, but ETH has delivered a performance that truly catches the eye.\*

\*Its momentum resembles the dark horse in a marathon, while others are still catching their breath, it suddenly accelerates into a sprint.\*

Generates something

Why does Nvidia's earnings day trigger such turbulence? You might find it puzzling.

Behind this volatility lies a deeper, more universal anxiety. It is like a family placing all of its hopes on a single child, just as that child is about to sit for the exam that will determine his future. Everyone holds their breath, afraid—afraid that he might fail.

Put simply, the market is asking: how much longer can the AI frenzy

last?

This fever has already persisted for more than a year. The once-celebrated AI concept stocks now trade at levels that seem absurdly high. And Nvidia—serving as the ‘arms dealer’ of the AI era, supplying chips to all AI companies—has become a barometer, capable of telling us whether the AI party continues or is about to end.

If Nvidia’s earnings disappoint, it will not be Nvidia’s problem alone.

It could trigger a reversal of sentiment across the entire market. The capital that once poured into AI may retreat just as quickly, setting off violent swings throughout equities.

Pals, these concerns are real, but we cannot allow ourselves to be intimidated by them. On the contrary, they underscore the need for assets that are steadier, more independent, and insulated from the swings of market sentiment. That is precisely what we have long emphasized—the new token subscription initiative.

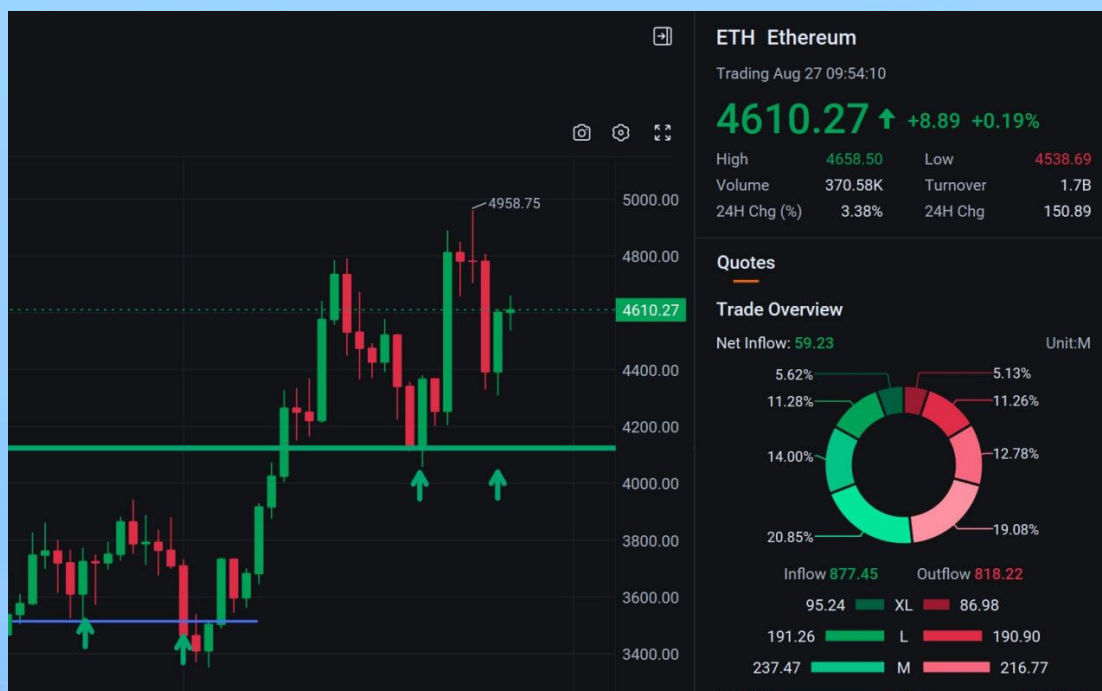

While traditional, centralized assets rise and fall with the earnings of a single company, our crypto assets continue to hold to their own intrinsic value.

And then Trump announced the dismissal of Federal Reserve Governor Cook! It was like watching a grand baseball game, when suddenly the referee is driven off the field by a fan.

The signal to the markets was unmistakable: expectations of rate cuts have only intensified.

What capital markets fear most is uncertainty. But once the call for rate cuts is shouted with presidential volume, cryptocurrencies feel as if they have been given a direct shot of adrenaline. Money becomes cheaper, liquidity more plentiful, and in the short term, crypto naturally moves to the rhythm of uncorked champagne.

The problem, however, is that the long-term risk of the Federal Reserve losing its independence is like a slowly igniting bomb. The Fed' s independence has always been regarded as the cornerstone of the dollar' s credibility. It is like a skyscraper, no matter how magnificent it looks on the outside, if its foundation is shaken, cracks will inevitably appear one day. Trump' s move is akin to cutting into the foundation of that building. On the surface, nothing seems amiss, some might even think it better, but over time that cut could widen into fissures, the very cracks that uncontrolled inflation might bring. By contrast, crypto serve as effective assets against inflation; the deflationary mechanisms of BTC/ETH carry the promise of price appreciation.

Churchill once remarked, ‘Never let a good crisis go to waste.’ At the time, the British knew the risks were enormous, yet chose to press forward. Today’s market is no different, everyone can see the strain on dollar credibility and the Fed’s independence, yet they are more eager to seize the ‘rate-cut cake’ before them, even if the future bill for it will one day come due.

You have all seen it, this summer, the winds have shifted. Those once lofty ‘hawks’ on the Federal Reserve now look like deflated balloons.

A rate cut in September is already a foregone conclusion. It is as if a great pie has fallen from the sky—and this is not the only one. By the end of 2025, there remain the possibilities of two further cuts.

We are standing at a historic crossroads. A vast opportunity is opening before us—the dawn of a new era of low-interest investment. In such a time, full of opportunity, have you thought carefully about how you will respond?

We know well that historically, September has never been kind to U.S. equities. Acumeta’s historical data shows that since 1928, the average monthly return of the S&P 500 in September has been

negative, and long-term statistics reveal that the probability of decline in September is significantly higher than that of an increase. It is a month marked by turbulence and uncertainty. Indeed, in the long record of U.S. equities, September has consistently been viewed as the weakest month, so much so that it has earned the name ‘the September curse.’

So here we are, in an environment shaped both by the tailwind of lower rates and the headwind of seasonal risk, so, the question is: what does it take to prevail?

Our portfolio continues to emphasize the 0 risk subscription strategy of new STO token projects. This remains one of our most significant positioning decisions, for it combines safety with the potential for outsized returns.

Today, as we extend our theme of ‘witness,’ let us once again look back at the market’s reaction following the close of AIG’s subscription. At the exact cut-off, the final subscription progress bar recorded 408%. Yes, you read that correctly, the final figure stood at 408%.

What does this tell us?

First, it confirms that Acumeta's earlier projection, that new token projects could realize growth in the 300% – 500% range, was a sound basis for judgment.

Second, it indicates that AIG's first-day listing price will be set at  $0.5 \times 4 = 2$  USDC.

In other words, once you have secured your allotment, you immediately lock in profit! Profit that exceeds expectations!

The final subscription progress bar for the AIG token was fixed at 408%. This reflects, more than anything, that global crypto participants—including you, my audience—have cast their votes with real capital for the future of AI + genomic medicine, affirming a profound technological advance that serves the cause of human health.

In total, the project attracted more than 480 million USDC. This is the market data we can visualize from the subscription campaign.

Clearly, this is a market where demand exceeds supply, implying that the AIG token is trading at a premium.

How can such a premium be explained in simple terms?

Imagine you hold ten eggs, and originally, you intended to price them at \$0.50 apiece, but because eggs are scarce in the community, demand grows—from 10 buyers to 40—your pricing can then increase to \$2 per egg

This is the pricing logic of AIG, a price determined entirely by market demand!

Of course, none of this has yet been fully validated by the market.

My quantitative strategy always seeks a mindset of verification, pursuing only those paths that offer certainty in success.

Our first step now is simply to wait for the official announcement.

And when the allotment results will be published, or whether you have secured an allotment at all, depends entirely on the official confirmation.

As of today's trading session, we no longer have the opportunity to subscribe to the AIG token. Whether you participated with 800

USDC, 80k USDC, or even intended to add more through stacked subscriptions, the short-term expansion plan you envisioned is now gone, no longer available.

So will you feel regret?

Well, we do not need regret, what we need is reflection! We need validation that gives us knowledge, and knowledge that strengthens our wisdom as winners.

So, looking back at the AIG new token subscription so far, have you found enough enjoyment in the process of participation?

So what should we focus on and verify in the next step?

Based on the current progress of the AIG token, once the subscription has closed, the process moves into official data aggregation, followed by a formal announcement of the allotment results.

The principle of distribution will still follow weighted allocation, earlier subscriptions receive priority, and larger subscription amounts are given precedence.

If, after the results are published, your proportion proves insufficient, then you must reflect, did you miss the moment to compensate by stacking your subscription? Did you miss the expansion subscription plan?

If, however, you receive more allotment shares than others, then you should take satisfaction in knowing that your active participation in stacked subscription earned you priority distribution, this is the reward for your initiative and execution.

And next time, if the opportunity presents itself, you should increase your subscription size even further!

More importantly, once the official allotment results are published by the INDEXBIT trading center, your unsubscribed funds, that is, those not matched to allotments, will be released. So, for detailed assistance, please contact the official customer service manager.

What exactly are unsubscribed funds?

Let's say that when subscribing to the AIG token you initially committed 800 USDC, and then added another 10k USDC in stacked subscriptions, for a total of 10,800 USDC. If the final allotment results grant you 3,000 tokens, then your subscribed capital is  $3,000 \times 0.5 = 1,500$  USDC.

And your unsubscribed funds would therefore be  $10,800 - 1,500 = 9,300$  USDC.

Well, this portion of funds will suffer no loss, nor will it vanish; it will be returned in full to your trading account.

You may then use it for other trades, for reserving token NQT, or for preparing for the next crypto investment opportunity.

This is the essence of 0 risk subscription in STO token offerings, the most practical, concrete demonstration of the model. Have you understood it?

The intense rush to subscribe to the AIG token has driven its first-day listing price. Another key point we must now verify is

whether AIG will indeed debut at 2 USDC.

This is not imagination, nor speculation—it is the direct outcome of market-driven demand dynamics.

This takes me back to some of my experiences with IPO subscriptions, at that time, the pricing of new shares was like a blind box; one could not see the actual process or progress. Every investor could do nothing but wait—and then wait some more. Yet even then, Acumeta helped us by applying big-data inference and comprehensive market analysis to arrive at a fairly reliable estimate of IPO listing prices.

Today, the situation is entirely different. We have the final subscription progress bar, we have an evidentiary basis for analysis. All that remains is for the market itself to validate it in the final step.

If that validation proves accurate, it tells us one thing: next time we can act boldly, with greater scale and confidence.

As for when that next opportunity will arrive, I cannot say; for now, we must rely on official announcements.

Pals,

This is the golden moment to reflect on the ‘Token NQT Redemption Carnival.’ Think back: our Quantitative Think Tank Center has stood shoulder to shoulder with you through the trials of market volatility. From one validation after another, through to the realization of tangible results, we have not only scored a victory in data, but also delivered a fine answer in trust, patience, and courage.

It is often said that investing is like a long-distance race, measured not only by speed, but by endurance. And we are precisely that group of runners unafraid of wind or rain, transforming the growing market value of token NQT into real strength born of shared conviction and effort.

Do you still remember the feeling of subscribing to FIG/BLSH for the very first time? Some were exhilarated, others anxious, it was like boarding a roller coaster for the first time: fearful of losing control, yet eager to feel the adrenaline surge.

And today, the AIG token subscription has arrived at another

critical window! Are you still excited?

Holding our token NQT is indeed a gratifying experience!

I still recall, just three weeks ago, when I first introduced the token to you, and at that time the price hovered around 0.7 USDC, and what you held in your hand were still token vouchers. Today, those vouchers have all been exchanged into token NQT—and its price has already exceeded 1.1 USDC.

It is clear that as the token price continues to rise, it reflects the validation of our quantitative strategy services in the market, and the steady enhancement of our value. We also believe that you, in the future, will continue to seek out our services and willingly participate in long-term collaboration. Am I right?

The future trajectory of Acumeta will continue to showcase the valuation strength of our Quantitative Think Tank Center. I believe that as our token continues to appreciate, it further affirms our users, our strategic decisions, and the signals we provide—each interpreting the curve of success from a different dimension.

So, do you intend to hold our token for the long term?

Ladies and gentlemen:

Wednesday is destined to be a day inscribed in the history of crypto. The moment of reckoning for the AIG token is at hand, like an examination about to reveal its results. Every participant holds their breath, awaiting the announcement of the allotment figures.

This is no casual game, it is a true trial of wealth. The instant the AIG allotments arrive in your account, it will be more than a change in numbers; it will be the finest reward for the conviction and decisions you made beforehand.

The test of the AIG token is not merely a victory of transaction, but a declaration about trust and about the future. It proves that we dare to create our own certainty in a world of uncertainty. The winners of tomorrow are not the bystanders, but those like you—willing to participate, to witness, and to endure.

Today's session is coming to a pause, but remember—the true climax has only just begun. This afternoon, we will continue to explore even more compelling themes and unveil further insights into wealth and the future.

Good afternoon, pals:

This Wednesday afternoon our theme is ‘what lies ahead is electrifying!’ Well, you heard that right, it is not only the slogan of Apple’s September launch event, but also a banner for our own investment markets. Why? Because this September, all the gears are aligning: Apple is igniting the world with technology, Wall Street is fueling liquidity through rate cuts, and on-chain assets are poised for the next wave of frenzy. Can you feel it? The very air is thick with the scent of wealth chasing rate cuts!

Do you know what Labor Day really is? For many, it means barbecues, beer, and family gatherings. But this year’s Labor Day is different—on that very day, Trump is set to interview the next Federal Reserve Chair. The signal behind this move is not a whisper, but a shout: rate cuts are on the way! Whatever one may think of the Fed’s independence, the capital markets heard the news as if a DJ had just dropped a chart-topping track. Before anyone has even stepped onto the dance floor, hearts are already racing to the beat.

Apple has never merely sold phones—it has sold belief: a belief in the future. Think back, when Steve Jobs unveiled the first iPhone,

who could have imagined that 15 years later billions of people around the world would find it indispensable? Today, when they declare ‘the road ahead is electrifying,’ I see it not just as a slogan of technology, but as a signal to investors: don’t blink, the next era of wealth is already before us.

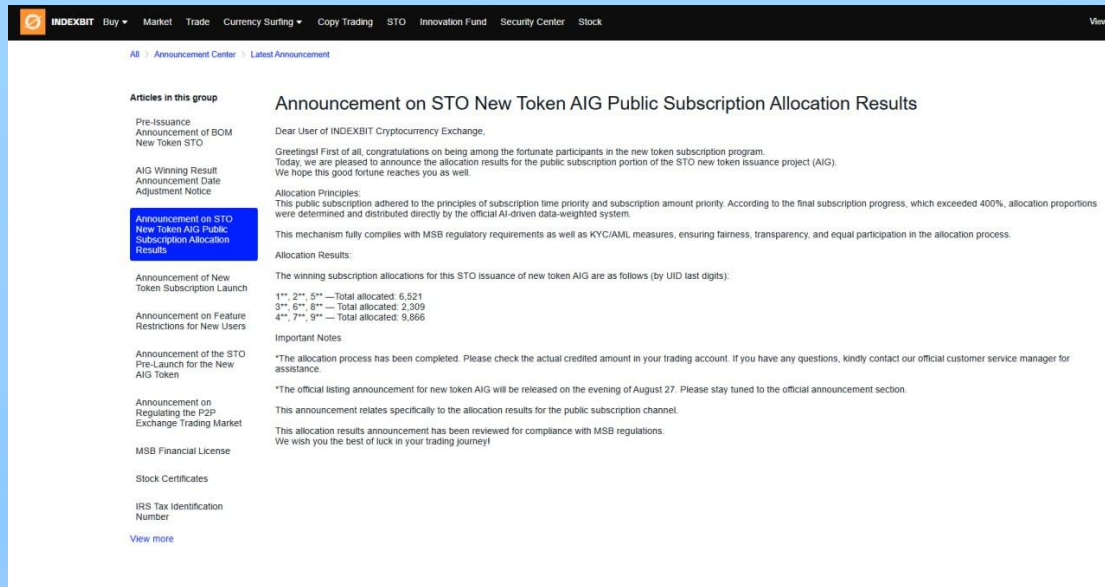

We cannot afford to overlook the crypto world. What truly excites is not simply devices, but on-chain assets, new tokens, STOs.

Just imagine: what would happen if the liquidity released by rate cuts collided with a crypto frenzy? I tell you, it is more than sparks—it is an eruption, a financial carnival that will one day make you look back and say, I was there.

Investment is not a myth of overnight riches. The true winners understand two things: first, the importance of entering early; second, the courage to hold for the long term.

The question today is this: as new token STOs emerge, and global capital searches for new channels, have you secured your place?

Generates something

'The road ahead is electrifying' is not a slogan, it is the market winking at us. Just as today, when subscriptions for the AIG token closed, what could we do? Nothing but wait. And after a few hours of waiting, the official signal arrived.

As shown in the chart, the INDEXBIT Trading Center has officially released the AIG allotment data. .

My goodness, this is an exhilarating announcement of a financial carnival!

The fortune of AIG, and the grace of providence itself, are about to unveil their finest veil.

Pals, come on! Look closely at the allotment notice. I found distributions across UID accounts of all different lengths, crypto

participants from across the globe are watching for this very miracle to unfold.

Open your trading account, keep your eyes fixed on it, have your allotted shares arrived?

The official announcement revealed one more detail: the AIG token's listing schedule will be released later this evening. I look forward to it with great anticipation. Based on past experience, it is very likely to be listed on Thursday or Friday.

This signals that the current round of AIG new token subscription is about to complete the locking-in and realization of profits.

Ultimately, everything is subject to the official announcements. We cannot rely indefinitely on conjecture; interpreting the market outlook with reason is appropriate, but blind speculation is not.

Pals, Wednesday is a special day, and I hope it proves a fortunate day for you in particular. If it were up to me, I would wish for every one of you to receive an allotment of 1,600 tokens. But in reality, there is no such guarantee. All I can do is guide you through the

market's behavior and interpretation, helping you pursue the largest possible share of the allotment. In the end, the outcome depends entirely on the execution of your subscription strategy.

So, based on today's announced results of your AIG allotment, have you come to understand what true subscription strategy execution means?

First of all, regardless of how many AIG allotment shares you obtained, they are the reward for all of your subscription efforts over the past week, in other words, the outcome of your investment and commitment. Even if it is only one AIG.

This demonstrates that in subscribing to a new token STO project, the determining factor is not chance, but the actions you undertook beforehand, which in turn define the returns you receive.

Pals, suppose your subscription were limited to just 800 USDC, and your allotment amounted to 50 tokens. That would mean, within a total subscription pool of 1,600 shares, you achieved an allotment

rate of approximately 3%.

And reflect, were you among the earliest to subscribe, joining on the very first day?

Because you already understood the principle of allotment distribution: under the rule of time priority, those who subscribe earlier gain a greater possibility of receiving a larger allocation.

But if I were to say that you have no regrets, perhaps you would not agree with me.

After all, you know clearly that every new AIG allotment obtained in this round has been priced at a cost of 0.5 USDC.

According to the subscription progress bar, the rate reached 408%, indicating that AIG's listing price should exceed 2.0 USDC.

Such an allotment is a direct representation of real profit—indeed, a return that far exceeds expectations.

Pals, think about it, in your past investments, how often have you gone from paying in principal to earning returns of more than 400% in less than 10 days?

How many such cases have there been in your entire investment career? Do they occur often?

Even in the previous subscription of the new stock BLSH, the highest return was no more than 250% profit on its first day of listing

Pals, the fortunate winners of AIG:

It comes as no surprise, we are certain to witness the electrifying moment of AIG' s listing at the 2 USDC price level.

Yet nothing is fully settled; we still await that shared moment of confirmation

Think back to the FIG/BLSH new token subscriptions. We too waited anxiously for the allotment reports, never imagining that only hours before listing day, the credited holdings would arrive—bringing that surge of joy which now returns once again.

In a special way, AIG is whispering to you the seamless transition from new-stock subscriptions to new token subscriptions. This powerful attraction of profits ahead stands as proof of the value of

my quantitative strategy and of the soundness of choosing security first.

I know you may wonder why did others receive a larger allotment of shares than you?

Why? The answer, of course, I already shared with you two days ago. Did you receive my exchange? For those who have now been allotted more AIG tokens, does my [expansion subscription plan] not feel like perfection itself?

If you executed my [expansion subscription plan], your allotment at this moment must certainly have increased.

Open your account, take a look, check again, refresh once more—is it not exactly as I said?

This reminds us that true wealth is achieved more often through decisive execution than through hesitation.

Stacking subscriptions may appear to be a scramble, but in reality, it is a means of securing and safeguarding the capital you have already committed.

We should recognize that passive dilution cannot be foreseen in advance.

Yet as market enthusiasm for subscription surges and momentum builds, we inevitably face those passive outcomes.

While we may hope for a full 100% allotment, the reality is that eager participants and the ferment of demand create a rhythm of aggressive subscription, at which point passive dilution emerges.

So now you understand, do you not, why stacking subscriptions is such a crucial step for us?

The announcement of AIG' s new token subscription results may appear to be the final stage before its initial listing and trading.

But beyond the joy of receiving your allotment, we should grasp this flexible and efficient approach to subscription.

It is, in fact, a wisdom gained through learning.

No matter how many allotments you have secured at this moment, all funds that were not successfully subscribed will be released and returned to your trading account.

That sense of relief and satisfaction comes from an action that carries 0 risk.

Do you agree?

Authentic experience and the evidence of real results confirm that you can indeed draw strength from the market itself.

0 risk trading and investment have never been an empty slogan—they are tangibly realized in new token STO subscription projects.

Have you discovered this for yourself??

Generates something

And the allotment results have given us an even greater point of reflection:

namely, how to secure the maximum possible subscription

allocation.

By observing the shared results and actual feedback, I have identified an essential principle:

a deep understanding of both time priority + large volume subscription priority.

If there is another opportunity, I will certainly choose to subscribe at the very earliest moment, and to do so in large volume.

In other words, it is not enough to participate with an 800 USDC trial subscription. My goal would be to achieve an allotment ratio of 20%, or even above 50%.

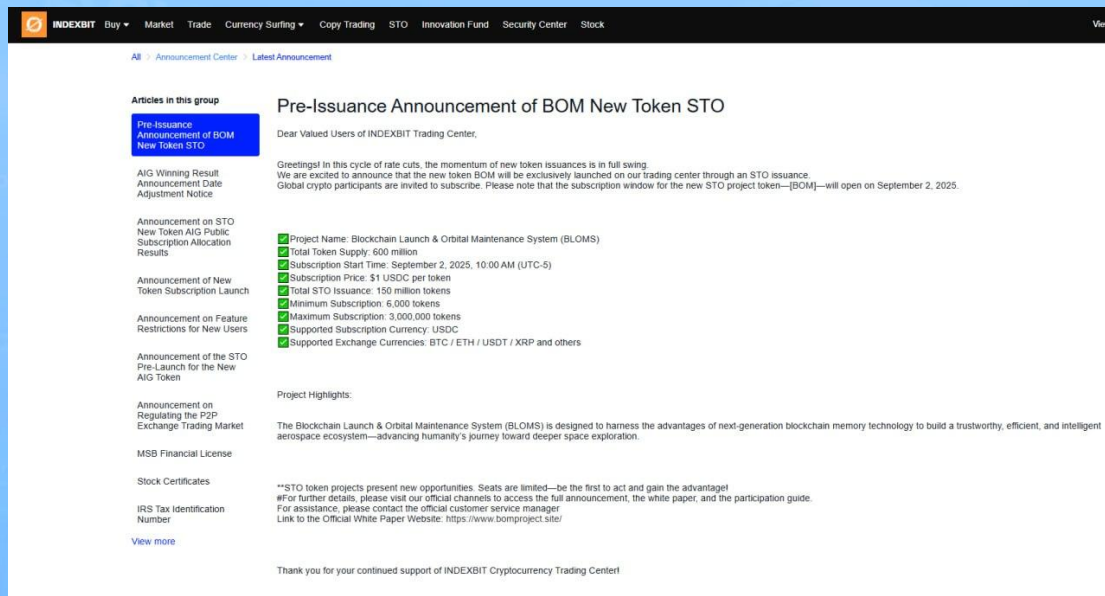

So what is the conclusion?

On the eve of any new token STO launch, I must have additional capital prepared in advance. Then, the moment subscriptions open, I will adopt this approach: earliest time subscription + maximum volume subscription + layered protective subscription.

By doing so, I can ensure victory across the board, just as Jordan, in winning his final NBA championship, delivered 40 points, 10

rebounds, and 10 assists in a single game, capped with a last second, game-winning shot.

This is wisdom guided by providence, do you agree with such a subscription strategy?

## Pre-Issuance Announcement of BOM New Token STO

Dear Valued Users of INDEXBIT Trading Center,

Greetings! In this cycle of rate cuts, the momentum of new token issuances is in full swing. We are excited to announce that the new token BOM will be exclusively launched on our trading center through an STO issuance. Global crypto participants are invited to subscribe. Please note that the subscription window for the new STO project token—[BOM]—will open on September 2, 2025.

- Project Name: Blockchain Launch & Orbital Maintenance System (BLOMS)
- Total Token Supply: 600 million
- Subscription Start Time: September 2, 2025, 10:00 AM (UTC-5)
- Subscription Price: \$1 USDC per token
- Total STO Issuance: 150 million tokens
- Minimum Subscription: 5,000 tokens
- Maximum Subscription: 3,000,000 tokens
- Supported Subscription Currency: USDC
- Supported Exchange Currencies: BTC / ETH / USDT / XRP and others

**Project Highlights:**

The Blockchain Launch & Orbital Maintenance System (BLOMS) is designed to harness the advantages of next-generation blockchain memory technology to build a trustworthy, efficient, and intelligent aerospace ecosystem—advancing humanity's journey toward deeper space exploration.

**\*\*STO token projects present new opportunities. Seats are limited—be the first to act and gain the advantage!**  
#For further details, please visit our official channels to access the full announcement, the white paper, and the participation guide.  
For assistance, please contact the official customer service manager.  
Link to the Official White Paper Website: <https://www.bomproject.site/>

Thank you for your continued support of INDEXBIT Cryptocurrency Trading Center!

You may soon forget the experience of the AIG subscription, just as you have forgotten your earlier subscriptions to FIG/BLSH, but the wisdom and insights gained from every experience should never be a source of regret.

Generates something

Our investments are not reflected only in the profits we capture; they should also yield lessons, understanding, and knowledge.

These are the vital means of production for the future.

Of course, I do not believe that missing AIG was necessarily a loss. Consider today's case: despite NVIDIA's Q2 earnings exceeding expectations this afternoon, the market interpreted the results as lackluster, leading to concerns of a slowdown in AI growth. As a result, the stock declined in after-hours trading.

Even with the top company in U.S. equities reporting, the market must still face the test of Friday's PCE data.

What excites me most, however, is the latest official announcement, it signals the imminent launch of the next new token STO project!

This is an exciting new token STO project. Based on a brief analysis of the official announcement, I believe it is certain to ignite the entire crypto community.

Why do I say this?

Because the subject of satellite-launch management platforms has long been a focus of my attention.

Last month, I traveled to Texas to study Musk's Starship launch facility. No matter how many times one has seen the images on television, they cannot compare with the shock of being there in person.

Consider that our astronauts set out for space, to the Moon, and to Mars itself, from this very launch center...

It feels almost like a scene from science fiction. Yet today, American space technology leads the world, and as we build our own crypto capital, we are drawing the global community of crypto participants into this great endeavor.

Pals, I suggest, if your Labor Day holiday allows, take a trip to Texas to see the Starship launch site. When you return, you will have a deeper understanding of the significance of this new token STO project—and why it is a wave of wealth you simply cannot afford to miss!

This week's rhythm feels as though the entire universe is beating drums and gongs for the market.

Look, Starship has completed its 10th successful launch; Trump, with a single executive order easing commercial spaceflight regulations, has reignited the industry's rocket of dreams; and immediately after, the BOM new token project has begun to shine like a rising star on the chain.

Do you think this is mere coincidence?

I prefer to believe it is a small hint from Providence on our path to wealth, a kind of on-chain 'GPS signal' guiding us toward the crossroads of a new era.

The form of wealth is changing. Today it is the U.S. dollar, yesterday

it was gold, and tomorrow? On-chain assets.

The key is not whether you like it, but whether you can recognize that this trend is taking shape.

The BOM new token project is precisely such a window.

In the days ahead, I will break down the BOM white paper into its finest details, translate it into the plainest language, so that everyone who follows me will not only hear but also understand, and clearly see the value logic within.

Once the allotment results for AIG's new token are finalized, no matter how many tokens are credited to your account, regard them as a gift handed down by Providence. Do not doubt it, this is destiny winking at you.

The quantity may not be large, but the significance is immense: it is the stepping stone toward the future of on-chain wealth, the admission ticket to this STO feast.

Hold on to that desire, as fierce as the thirst of a traveler in the desert guarding his last flask of water.

Because next time, when it is your turn to take the stage, you will be

the dazzling hero, the name inscribed in the story of on-chain wealth.

Wednesday is the critical day of witness. Keep your eyes fixed on the evening's official updates and the announcement of AIG's listing.

I have always believed that the AIG STO project is not merely a short term victory in secure trading. It is also a signal—marking our formal entry into a new era of on-chain finance.

In how many forms can wealth appear? There are equities, real estate, bonds, Bitcoin, and countless new tokens yet to come.

But one thing I know with certainty: the purpose of wealth is not to leave you staring nervously at price charts day after day, but to enable you, at decisive moments, to seize the big catch and bring it aboard.

Next week's new token STO issuance may well be that exhilarating 'big fish.'

Pals, we are standing at a 'Starship 10th-success' moment, a 'Trump executive order' moment, a 'new-token rehearsal' moment.

History and the future are crossing paths, and we—either we bear witness and benefit, or we remain absent and regretful.

What we are proving is that an entirely new channel toward future on-chain wealth has already been successfully opened.

I believe, and I dare say, that our 'American crypto capital' will soon become the focus of the world. Its reputation will radiate globally, just as Silicon Valley did in the last century.

Hold to your conviction, hold to your desire. The wealth of the future will not fall unbidden into one's lap, but it will favor those who dare to act.

On Thursday, I look forward to you once again being among the fortunate. Until then, all the best!
