

Dear members of the Quantitative Winners Legion, and all friends
on the journey toward financial freedom—
welcome back to a brand-new week in this storm-ignited October.

Over the past week, the U.S. federal government shut down, and
the halls of Washington fell into unprecedented silence.
The most crucial economic indicator "nonfarm payrolls" was absent,
yet, in this "information vacuum," the capital markets delivered a
breathtaking miracle: Bitcoin surged past the \$125,000 mark!

Well, you heard that right, that number has become the "buzzword"
across the global wealth community this weekend.

Some are cheering, some are in awe, and some are full of
regret—because they saw the opportunity but didn't take action.

But we—the Quantitative Winners Legion—had already positioned ourselves for this victory a week in advance.

Let's take a moment to look back at this dramatic situation.

Government shutdowns, fiscal deadlocks, congressional tug-of-war...

It sounds like the story of a nation whose machinery has fallen into chaos,

but the market's reaction was quite the opposite — risk assets— especially Bitcoin—began to soar.

Generates something
Why?

Because when the "lights of power" go out, the light of faith in the market shines even brighter.

In such moments, smart money doesn't panic.

It looks instead for a store of value "independent of governments, policies, and fiat currencies."

And thus, Bitcoin has become the "digital gold" of our era.

Have you noticed?

Every time human institutions fall into uncertainty, the market instinctively turns back to systems that "don't rely on human trust" —and crypto is exactly such a system.

Now, let's shift our focus from Bitcoin's euphoria back to the broader macro picture.

At the same time, the U.S. Department of the Treasury and the Internal Revenue Service have launched an internal coordination effort on a "digital asset taxation framework."

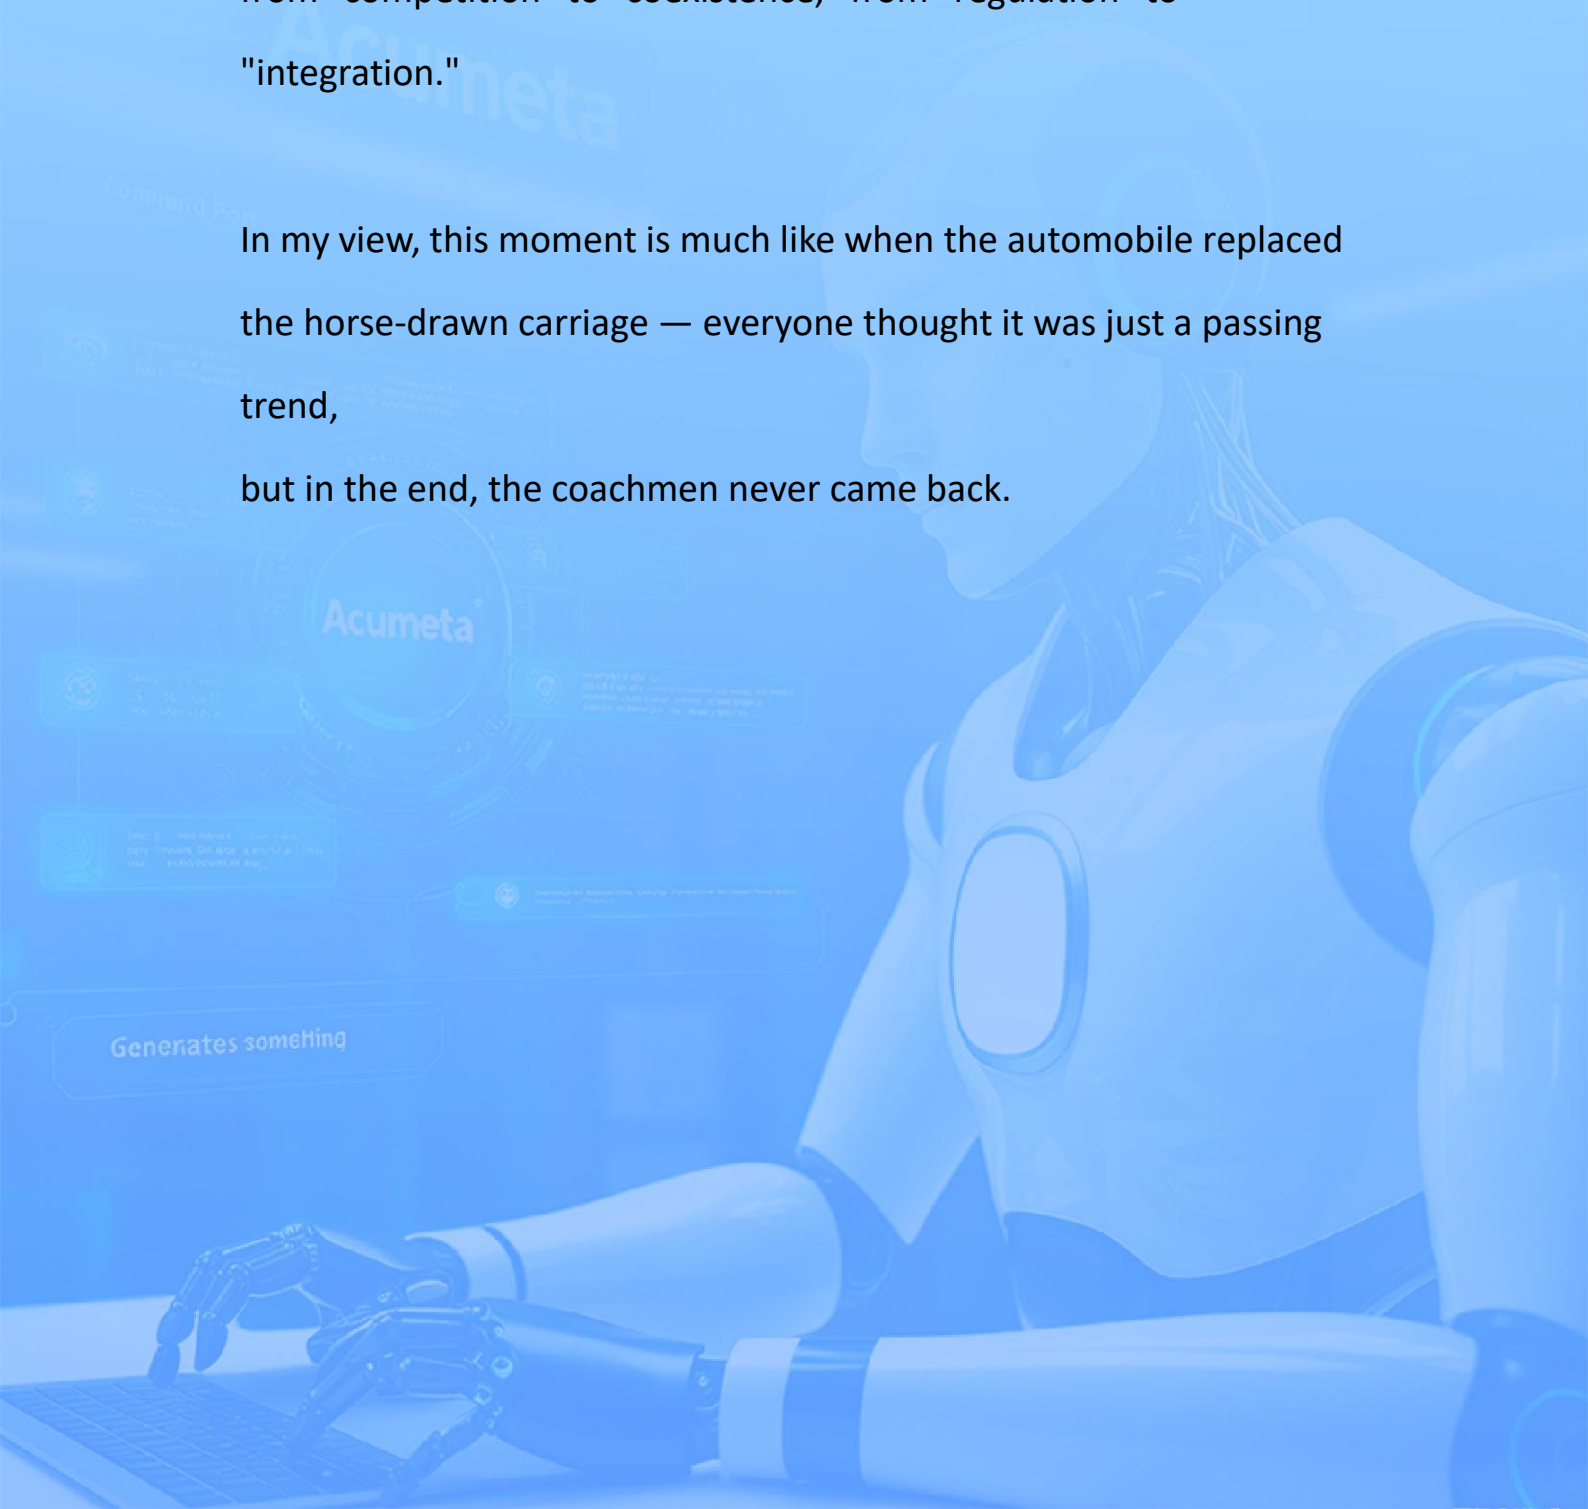

The new Treasury Secretary, Bessent, has taken on a dual role overseeing the nation's tax administration — a strategic move that signals the future tax system will place greater emphasis on tracking and evaluating crypto assets.

What does this signal tell us?

A new financial order is taking shape. The strategic game between the traditional U.S. dollar system and the crypto ecosystem is evolving —

from "competition" to "coexistence," from "regulation" to "integration."

In my view, this moment is much like when the automobile replaced the horse-drawn carriage — everyone thought it was just a passing trend, but in the end, the coachmen never came back.

Wealth is not a number, it's a reflection of confidence

Pal, \$125K Bitcoin isn't just a string of digits; it represents a new era of mindset.

And that mindset isn't greed, it's the return of confidence.

Do you still remember the market lows of 2022?

When Bitcoin fell below \$20k, and the headlines were filled with talk of a "crypto winter" and "regulatory panic"?

Those who had the courage to enter the market back then have now seen 10x growth;

Those who hesitated and waited on the sidelines are now asking, "Is

it too late to get in?"

The cruelty of wealth lies in this simple truth:

It always rewards those who dare to act in the midst of a storm.

As Amazon's founder Jeff Bezos once said:

"The hardest decision isn't to take a risk — it's to reject comfort."

And now, this very moment, the BTC storm is rising once again,
ETH is approaching \$4600,
market sentiment is reigniting,
and Acumeta's strategy-driven model continues to shine.

Last Wednesday, one of our Legion members in Los Angeles,
following the system's diversification signal, entered a short- to
mid-term BTC trade with just 5% of his position as a test.

The result? In only 3 days, he earned over 700% in profit.

When I asked him how he truly felt about it,

he smiled and said, "It's not just about making money, I've gained confidence"

Well, everyone—that's the most captivating part of quantitative investing.

You no longer rely on emotion, or gamble on the future. You rely on data, systems, and the compounding power of time.

That's the key difference between the Winners Legion and ordinary retail traders— we don't guess the market, we read its language.

And wealth has never been just a numbers game, it's an attitude, a belief, and a reward that comes to those who act and wait.

In a week marked by a government shutdown, market fog, and unclear policies, every member of the Quantitative Winners Legion must keep riding this great financial wave, with wisdom and strategy, to seize our own golden October.

This October is anything but ordinary.

It's not just the season when the leaves turn golden and pumpkin

lattes fill the air;

it's the festival season for crypto.

We are standing at a historic turning point:

the Fed's interest rate cut decision is drawing near, and the federal government shutdown drama is, in an "unexpected way," accelerating the inevitability of that cut.

Someone asked me, "Why would a government shutdown actually increase the likelihood of a rate cut?"

The answer lies in an old story about how the U.S. economic system works—when fiscal spending stops, money must start to flow.

Think of it this way: the U.S. fiscal system is like a giant SUV.

When the engine stalls, the budget can't pass, and the government ceases to function,

the entire economy's cash flow begins to slow down.

That's when the Fed steps in as the "firefighter"

History has shown us this time and again:

after every government shutdown, the Fed almost always adopts

monetary easing measures—

not to please anyone, but rather to prevent a breakdown in the

system's liquidity.

History has shown us this time and again:

after every government shutdown, the Fed almost always adopts monetary easing measures—not to please anyone, but rather to prevent a breakdown in the system's liquidity.

When the government shut down for 16 days in 2013, the Fed extended the QE3 cycle.

When it shut down for 35 days at the end of 2018, the Fed announced in March 2019 that it would halt rate hikes and prepare for cuts.

And now, in 2025, the United States once again stands at the doorstep of that same cycle.

My friends, do you know what this means?

It means a new wave of liquidity release is about to begin!

That's why we call this October "the golden autumn of crypto". And it's also Q4's Crypto Ode to Joy!

Many people only see the short-term gains brought by rate cuts, but they fail to notice the deeper "logic of wealth redistribution behind them."

Rate cuts mean the price of money drops, and when money becomes cheaper, those who are closest to the center of liquidity are the ones who earn the most. Just look at the exchange rates between the U.S. dollar, the euro, and the yen over the past couple of days, we can clearly see where the flow of wealth is heading

Rate cuts aren't opportunities for everyone to get rich — they're moments when the smart seize the curve to overtake.

And that's precisely why our Quantitative Winners Legion exists. During a rate-cut cycle, we use the Acumeta quantitative model to capture volatility ranges and lock in upward channels. This isn't gambling, it's a game of precision and strategy.

If you take a close look at historical data, you'll notice an astonishing pattern:

Since the 2008 financial crisis, nearly every Fed rate-cut cycle has triggered a massive bull run in the crypto market.

2008 – 2009: The Fed's first 0-interest-rate policy — BTC was born;

2015 – 2016: Another easing cycle — ETH rose to prominence;

2020 – 2021: Pandemic-era rate cuts — BTC surged from 4K to 68K.

2024: Rate cuts again — BTC climbed from 60K to 100K.

And now, in 2025, as the Fed prepares to initiate its second wave of rate cuts, we may well be witnessing the early tremors of another "wealth volcano" waiting to erupt.

Rank	Name	Symbol	Market Cap	Price	24h	7d	Price (30 days)
1	Gold	GOLD	\$26.672 T	\$3,971	1.61%	2.91%

3	Microsoft	MSFT	\$3.891 T	\$523.51	1.19%	1.73%	
4	Apple	AAPL	\$3.827 T	\$257.9	-0.05%	1.36%	
5	Alphabet (Google)	GOOG	\$2.979 T	\$246.77	0.13%	0.99%	
6	Silver	SILVER	\$2.727 T	\$48.45	1.00%	3.11%	
7	Bitcoin	BTC	\$2.489 T	\$124,914	1.36%	9.77%	
8	Amazon	AMZN	\$2.332 T	\$218.69	-0.38%	-1.57%	

15 years ago, BTC was nothing more than a small experiment in the tech community.

15 years later, it has become the sixth major asset class in the global financial system.

Who could have imagined that this revolution would unfold so quickly?

According to Acumeta global data,

since 2010, 67 out of the world's top 100 crypto investors have achieved net assets exceeding \$1 billion.

Many of them weren't from Wall Street, among them were programmers, designers, even college dropouts.

But they all shared one thing in common—they chose to trust the trend when others were still in doubt.

It reminds me of a story about a friend from Texas.

He bought BNB back in 2017 — when it was just \$0.10.

Today, BNB's market cap has surpassed that of Deutsche Telekom, a century-old European industrial giant.

A "token" surpassing a traditional industrial company in market capitalization, that's not a joke, it's reality.

And behind it lies more than just investment returns, it represents a fundamental shift in the global economic structure—from industrialization to digitalization.

The historical Q4 interest rate cut waves — the quarters of wealth transfer; every 4th quarter is like a "seasonal symphony" of capital. Everyone on Wall Street knows a saying: "The Fed's 4th quarter is the harvest season for capital."

Why?

Because Q4 is the time when liquidity across the entire year is rebalanced.

Adjustments to foreign exchange reserves by central banks, fiscal budget reallocations, and the repatriation of corporate profits, all these factors combine to create an exceptionally abundant flow of market capital.

Q4 2009 —the S&P 500 rose by 23%;

Q4 2019 —BTC rebounded 82%;

Q4 2020 —ETH surged 118%.

And in Q4 2025, we are entering a triple-layered golden season — rate cuts+ Acumeta quant models+ crypto market revival.

It's like 3 powerful winds blowing in the same direction — forming a hurricane of wealth.

Whether it's through currency surfing or new token subscription projects, I expect every member of the Quantitative Winners Legion to have at least 20x to 30x profit potential, depending on how much of this abundance you can capture.

Times are changing, and so is the definition of value.

In the past, we believed that "factories, land, and machines" were the true symbols of wealth;

Today, we understand that "algorithms, consensus, and trust" are the real assets.

The reason BNB's market cap has surpassed that of Deutsche Telekom

is because it carries a new economic language— "the right to circulate value consensus."

It's not a company, it's the central channel of a global system.

Likewise, every holder of our Think Tank Center token, NQT, has benefited from September's upgraded quantitative services, gaining the favor of global whale investors. Now, the token's market cap is approaching \$1.5 billion, so tell me, for you, as a holder of this token, doesn't that make this autumn your own season of harvest?!

My friends, ladies and gentlemen, we are now standing at a historic moment of wealth— what we call "Q4's Crypto Ode to Joy"!

This is not your typical year-end quarter.

This is not one of those tired clichés from Wall Street telling you to "buy and hold."

This is our own financial symphony, composed by our most advanced quantitative trading strategies, played for ourselves!

Because over the past seven days, I have personally witnessed BTC surge from \$114,000 to \$125,000.

That wasn't just a price movement, it was the migration of capital's will, the revival of confidence, and the moment when those who understood how to diversify strategically began cashing in on their intelligence dividends.

When I gave the first diversified signal last week, BTC was still at 114K.

At that moment, many hesitated.

Some asked, "Will it pull back?"

Some wondered, "Wouldn't it be safer to wait a bit longer?"

And I simply asked one question:

"What if what you're waiting for isn't safety, but a missed opportunity?"

The essence of a diversification strategy has never been about "bottom-fishing and top-chasing"

It's about rational allocation and dynamic adjustment, capturing the highest-probability profit zone amid market volatility.

Acumeta, based on trading capital conditions, has established standardized and scientifically sound criteria for identifying trading signals. According to different position standards, it publishes high-frequency signals with exceptionally strong success rates.

As Monday continues the weekend's heated trading atmosphere and October's rate-cut expectations grow stronger, Acumeta has conducted a comprehensive assessment and identified a strong opportunity—therefore issuing a currency surfing trading alert;

The trading signal is suitable for Quantitative Pioneer tier members and will be sent privately by my assistant via private message, with

customized instructions tailored to your specific trading capital.

Do not post opening-position screenshots publicly in the group, in order to maintain the confidentiality and compliance of the signal, and to safeguard member rights.

All members of the Quantitative Winners Legion at this tier, listen carefully

Current big data and pattern recognition analysis by Acumeta indicates that this week's identified signals project a cumulative profit potential exceeding 1000%;

>>>Advantaged position holders: Get ready to add positions and build new orders for your BTC/ETH currency surfing diversification trades, extending and expanding on last week's base-position profits!

>>>#Please open your account at the INDEXBIT crypto trading center now, find the currency surfing trading interface, and prepare your capital to align with the incoming signal for contract order

execution.

>>>If you have not yet met the conditions to access these signals,
please contact my assistant immediately for upgrade support.

The underlying market logic of Q4' s Crypto Ode to Joy: rate cuts,
liquidity, and the revival of risk appetite

In this Q4, the Fed' s monetary policy has entered a "second
rate-cut" cycle.

That means — U.S. dollar liquidity is being released again, and risk
assets are rising again.

As one of the most liquid and leveraged asset classes in the world,

crypto naturally becomes the first choice for capital reallocation.

When I saw CME's BTC futures open interest climbing steadily, I knew immediately — this isn't a retail frenzy, it's a signal that institutions are re-establishing positions.

This moment's diversification isn't speculation, it's following the trend.

What we're aligning with is the Federal Reserve's liquidity; what we're riding is the wave of capital flowing back into risk assets.

If you could turn back time to last week, how much margin would you have put into that diversification signal?

The question isn't to make you regret, it's to make you think.

Wealth has never lacked opportunities — only people with the courage to take action.

The core of the diversification plan is to help you find balance between risk and hesitation.

Once you've completed your top up, we'll continue this afternoon

to explore safe and efficient ways to grow your assets!

Ladies and gentlemen, today we don't need any long-winded or convoluted talk, we're here to focus purely on the facts and the numbers!

Let me open with one line to describe this month's crypto market —
"It's not rising, it's charging forward."

Well, this October, BTC and ETH are climbing to new heights with an

unstoppable force.

Their price curves resemble a mountain road reaching for the sun,
at every turn, confidence and capital converge.

Each dip, instead of signaling weakness, becomes the launch point
for the next surge.

Q4's crypto market is a true Ode to Joy,
but the real "melody" plays only for those who understand the
rhythm.

And our diversified plan is the metronome that keeps that rhythm
alive.

Whether you're a newcomer just stepping into the world of crypto,
or a seasoned investor who's weathered bull and bear cycles,
remember this — wealth never belongs to the watchers, but to
those who take the first step at the right moment.

When BTC rose from 114K to 125K, with each coin gaining over
\$10k in profit, that was more than just a string of numbers, it was a
collective paean to wisdom, courage, and action.

As ETH approaches \$4800, we've watched it surge from \$4200 since last Monday, a \$600 gain per coin in just one week.

Can you imagine the immense power of wealth hidden behind that movement??

If you look closely, you'll notice that the "breath" of this market has changed over the past few weeks.

From the cautious observation at the end of September to the acceleration in early October, the entire crypto world suddenly came alive.

It's like a sleeping giant that, after a long buildup of strength, has finally started to run.

The market always rewards those who wake up first.

While most people are still hesitating about whether to get on board,
those who took action early are already enjoying the view along the way.

Generates something

The psychology of wealth: why do rising markets always make people doubt?

In my Acumeta quantitative research, I discovered that—90% of investors tend to doubt when a trend begins, observe when it's in mid-phase, and chase when it's about to end. That's human nature.

Because I believe in trends, not public opinion. I've repeated this line on numerous occasions in various programs.

Because trends never persuade you with words, they convince you with time.

And this October's rally is the gentlest reward that trends could ever give to true believers.

This surge in BTC + ETH isn't random hype, it's built upon deep structural logic:

The Fed's rate-cut signal reignited risk appetite in the market. Institutional capital is reallocating into digital assets, with surging volumes in ETFs, custody services, and derivatives trading.

Bitcoin's halving cycle is approaching, amplifying the long-term supply-demand tension.

The integration of AI computing power and blockchain has brought renewed capital support to the Ethereum ecosystem.

This rally is no longer emotion-driven, it's structural transformation.

A migration of capital, of conviction, and of wealth.

And right now, the crypto market is the "most efficient destination for capital flows"

Let me tell you a short story.

In the deserts of Arizona, there is a group of falcon trainers.

They discovered that when a storm approaches, all other birds fly

toward the valleys to take shelter,
but the falcons choose to fly against the wind, because they know,
the stronger the wind, the higher they soar.

Isn't that exactly like our investment mindset?

When the federal government shutdown brings fear and confusion
to the markets, some people hide, some wait,
but the true winners are those who choose to take flight with the
power of the storm.

And right now, October's market is that very "falcon wind."

If you have the courage to spread your wings, you can soar higher
than the rest.

The market is always neutral, it doesn't target anyone.

It's like a mirror, reflecting each person's emotions, greed, fear, and
courage.

The weather may be cooling, but the market is heating up.

Everything is changing.

And those who know how to harness change, are the ones who
capture the rewards of the cycle.

Let's move forward with rationality, conviction, and action,

and together, stand atop this new peak of wealth.

Looking back at last year's election campaign, Musk's support for Trump came down to one thing—he loves taking on uphill battles.

As the richest man in the world and someone who wields control over a major social media platform, Musk has more than enough wealth and influence to fund and spread any message he wishes.

This power is likely one of the factors behind his involvement in the presidential race.

However, an equally important reason why Musk is willing to invest so much money and energy in supporting Trump is simply—"because he can"

Musk clearly enjoys being a "contrarian", someone who challenges conventional wisdom within elite circles.

And in the current U.S. political climate, nothing is more contrarian than throwing one's full support behind a MAGA figure like Trump.

As for my own quantitative strategy service, my goal is to create a new archetype of the opportunist investor—to help Quantitative

Winners Legion members achieve millions in profits, and shareholder-level members reach tens of millions.

And now, I've already found the practical path to make it happen.

Why can lower-tier members of the Quantitative Winners Legion earn millions, while shareholder-level members earn tens of millions?

This is due to the unique and significant events in October, which have drawn powerful volatility into the crypto market.

This surge in volatility has heightened Acumeta's market sensitivity.

As short-term upward momentum shifts within the market, the resulting fluctuations, both upward and downward, create vast profit spaces.

This environment is extremely favorable for Acumeta to capture ultra-short-term profits, thereby enhancing 2 key factors:

1. This week's trading signal frequency will be exceptionally high.

Each order placed could potentially create a new profit peak — exceeding 100%.

2. This week's BTC+ETH currency surfing diversification plan, combining short- and mid-term volatility with rolling-position signals;
3. As long as you complete a Legion-level upgrade this week, Acumeta will identify and share 1–2 signals capable of producing single-trade profits exceeding 300–500%;

Therefore, every member, at every level, of the Quantitative Winners Legion has the real potential to achieve seven-figure profits.

Through objective case studies, we can clearly see how to secure million- and even ten-million-level gains.

Amid the tremendous trading opportunities of currency surfing, it's not just about earning substantial profits from each individual order — you also need to seize the multiple Acumeta signal frequencies available this week.

Only when all 3 conditions are met can members of the Quantitative Winners Legion truly achieve million-level profits.

Let's say your currency surfing account currently holds \$20k

You could choose to top it up to \$200k

By doing so, you expand your Acumeta trading frequency, allowing you to fully participate in every signal and significantly amplify your profit per order. You'll also avoid being limited by signal restrictions, which could cause you to miss new trading opportunities.

With a \$200k position, and given the number of signals available this week, you'll be able to reach your \$1 million profit target.

Because achieving just a 5x increase in your total capital would be enough to reach the goal.

And considering this week's strong market volatility, the potential profit margins from currency surfing are already within the 800–1000% range.

There's really no extra difficulty in reaching that goal.

Do you see it now, pal?!

Generates something

How does the "Empire Architect's Ten-Million-Profit Plan" work—what kind of miracle are we talking about here?

Well, it's about using this week's rare currency surfing profit wave to drive a full-scale profit upgrade for shareholder members.

First, the Empire Architect shareholder members form the cornerstone of our future quantitative enterprise. They represent the core of our strategic expansion across the United States, and when Acumeta eventually goes public, shareholder members will stand as our most valuable long-term partners.

Although the Think Tank Center, due to its unique institutional nature, does not need to apply for a Nasdaq listing, that doesn't stop our shareholder members from becoming the favorites of profit and success.

Let's assume your current trading position is \$500k, and if you choose to top up to \$5 million and become a true Empire Architect shareholder member, earning ten million in profits simply means doubling the total value of your capital.

With this week's extraordinary currency surfing profit opportunities of 1000–1500%, combined with the superior Acumeta signal

frequency exclusive to shareholder members, you can successfully reach the summit as a ten-million-profit winner.

This is a rare, once-in-a-lifetime wealth opportunity!! It is a decisive choice in favor of opportunism!

Why does an internal upgrade of Legion members this week trigger Acumeta to reward a single currency surfing signal with profits of 300–500%?

1. It's due to the strengthening macroeconomic expectations of a rate cut; 2. Because market volatility is surging, creating ample profit potential, data shows that with a 5% price swing and 100x leverage, that's a 500% return;
3. Enhancing the ability to identify and select rare high-volatility opportunities, while filtering out the impact of minor fluctuation signals.

In the past 20 years of Fed history, every rate-cut cycle has triggered the explosive rise of two asset classes:

First, high-growth tech stocks;

Second, cryptos and digital assets.

This is no coincidence, it's the law of capital migration.

While others are still debating whether the Fed will cut rates, we've already started calculating our profits.

And Acumeta's system is the engine that drives your currency surfing trades — farther and steadier than ever.

Let's do a simple calculation:

When the market volatility of a currency surfing trading pair reaches 5%, using 100x leverage means a theoretical profit of 500%.

The Acumeta algorithmic system scans more than 4200 trading pairs every day,

monitoring in real time — price movements, trading volume, capital flows, social sentiment, and futures funding rates.

It isn't human, it doesn't rely on emotions;

it focuses on one thing — striking at the point with the highest

probability of success. The system automatically filters for signals

with extremely high confidence levels,

which is why those 300%–500% profit currency surfing opportunities emerge.

This isn't "gambling," it's "algorithm."

It's not about "thrill," but about "precision."

After Acumeta's intelligent system upgrade, the first thing it does is eliminate 99% of the "noise signals,"

leaving only those opportunities with high volatility, strong confidence, and clearly defined profit potential.

Someone asked me, "why are these high-return signals available only to members who upgraded this week?"

Because the market has never been about equal distribution.

Just like in a marathon, only those who start first get to see the ribbon at the finish line.

This week, when you top up and upgrade your Quantitative Winners Legion membership, it's not just about meeting a funding threshold

it's about crossing a threshold of signal access and execution efficiency.

Higher-tier members gain faster data access, greater risk control precision, and larger capital capacity to capture profits within short-term volatility windows.

Upgrading gives you the right to choose and access exclusive signals.

It's like owning a more advanced car, it allows you to go farther down the road.

And Acumeta's rewards are, in essence, the "outcome-based returns" given to those who dare to upgrade and take action.

Acumeta, based on trading capital conditions, has established standardized and scientifically sound criteria for identifying trading signals. According to different position standards, it publishes high-frequency signals with exceptionally strong success rates.

On Monday afternoon, currency surfing trades is highly active.

Acumeta's composite assessment indicates a strong opportunity,
therefore issuing a currency-surfing trade alert;

This trading signal is designated for Strategy Master-level members
and will be sent individually via private message by the assistant for
customized trading capital allocation.

Do not post opening-position screenshots publicly in the group, in
order to ensure the privacy and compliance of the signal and to
safeguard member interests.

***All members of the Quantitative Winners Legion at this level,
please contact the teaching assistant to receive the signal***

Declaration of victory and the wealth contract: the final chapter of
the currency surfing honeymoon.

Fellow members of the Quantitative Winners Legion, true predators
in the vast ocean of capital!

We have discussed the grand macro trends, we have dissected the

mathematical logic behind 500% profits,
and we have proven with ironclad facts that October's wealth
carnival needs no further validation from anyone!

When time has passed and we look back on the month of October,
it will stand as a battle fought without smoke or gunfire — a
collective awakening amid a wave of wealth.

In this team we call the "Quantitative Winners Legion," there are no
accidental survivors.

Behind every signal upgrade, every diversification strategy, every
precise decision lies your perseverance, your learning, and your
respect for timing.

The signal upgrades Acumeta grants within the Legion are not
merely "rewards", but a recognition of insight and a tribute to
courage.

This October, the name Quantitative Winners Legion has already
been inscribed in the memory of time.

And in the coming months of November and December, we will
enter the key stage of the second phase—"wealth amplification"

Thank you all! We'll meet again on Tuesday at our next point of

victory — see you in the splendid moments of currency surfing!
