

A brand-new week! A week that brings us closer to Thanksgiving!

Victorious quantitative winners, welcome back to our quantitative strategy program!

Thank you for your decisive execution over the weekend! Now, we must shift our focus from the keys you've secured to the broader macro battlefield —one charged with both risk and opportunity.

A major data storm is about to break! This Thursday, the long-delayed September Non-Farm Payrolls Report, postponed for over a month due to the government shutdown, will finally be released!

This data is not just another number! It will be the detonator that either confirms or overturns the market's rate-cut expectations.

If the data is weak: the market will confirm expectations of rate cuts, triggering a rebound.

If the data is strong: the market will abandon those expectations, triggering another wave of panic selling.

This macro uncertainty will bring relentless market volatility! Risks and opportunities flashing by in an instant!

It's easy to see that this week could turn into a rough one for traders —uncertainty and fear are likely to dominate the markets! Those still struggling in traditional stocks and crypto will once again be swept back and forth by the incoming wave of data and the Fed's statements!

What makes this week even more interesting is that it's not just any week —it's the week before Thanksgiving.

As we like to say in America: Thanksgiving week always brings the truth to the surface.

This year is no exception, only this time, it's arriving faster, louder, and with a lot more heat.

This Non-Farm Payrolls report is not an ordinary one, it is the first real compass following the "data blackout."

It could either confirm the path toward rate cuts, or completely

erase that expectation.

Ordinary traders are preparing for a "roller coaster."

Retail investors don't even know which track they're on.

Meanwhile, fund managers are already setting up "hedges + locking in positions ahead of time"

In such a market week, there is no room for the timid. You either seize the opportunity, or drown in the volatility.

But you —you're not part of this week's "world of panic"

My friends, allow me to say something you'll understand better than anyone:

you are not an ordinary trader,

you operate on a different plane entirely.

And do you know why I say that?

Because while the traditional markets brace for a data shock and prepare to weather another wave of volatility, you've already moved onto an "entirely different track":

the MPG new-coin subscription.

Do you know what that means?

It means that while others are guessing, gambling, and trading blind this week,

you're operating with one thing they don't have—certainty.

While others await the non-farm payroll report, you await allocation.

While others fear volatility, you only worry about share dilution.

While others dread the uncontrollable swings of the market, your MPG follows a mathematical curve untouched by macro noise.

For most people, this week looks like a "dangerous one", for you, it is a "strategic allocation week."

Generates something
Why do I dare say this?

Because this week, in the world of MPG, there is no panic, no

volatility, no risk—

there is only the strategic allocation phase.

What is strategic allocation? It is the only window that allows you to lock in your share early, beat dilution, and ensure maximum profit.

While everyone else is trembling over Thursday's non-farm payroll data, you're already sitting comfortably in the engine car of the "new-coin profit train"

What you care about isn't whether the market rises or falls, but rather:

who can secure the larger share,

who can stand in the front line before dilution begins, and who will be the one smiling at the end of this limited-allocation battle.

Do you know what MPG's current landscape looks like?

The more turbulent the market becomes, the more people rush in to subscribe.

The more fear takes over, the more they crave certainty.

And the blurrier the data gets, the more they choose profit pools untouched by macro chaos.

By being in MPG, you' ve already chosen the most effective form of risk hedging.

On the Launch of the STO Strategic Allocation Subscription for New Token	
On the Launch of the STO Strategic Allocation Subscription for New Token	Dear Users,
Notice on P2P Certified Merchant Financing and Lending Promotion	We are pleased to announce that the Special Subscription for the STO Strategic Allocation of the new token [MPG] will officially commence at 10:00 AM (ET) this Sunday! This allocation follows a subscription-based model. Users are required to submit an application in advance, complete the funds verification after deposit, and will then receive the full subscribed allocation immediately——no need to wait for any allotment results.
Announcement on the Special Action Plan for the MPG Subscription	Subscription Details Token Name: MPG Total Issuance: [30,000,000 tokens] Subscription Period: [November 16, 2025, 10:00 AM] – [November 21, 2025, 12:00 PM] (UTC-5) Subscription Method: Participate through the New Token Issuance section of INDEXBIT Cryptocurrency Exchange Issuance Price: 6 USDC Minimum Subscription Amount: 100,000 tokens Maximum Subscription Amount: 2,000,000 tokens
Warning on Potential Significant Allotment Reduction Due to High Demand for the MPG New Token Subscription	Subscription Process Log in to your [INDEXBIT Exchange] account and contact official customer service to request the subscription application form.
Commencement of the New Token STO Subscription	Important Notes Please ensure that your account has sufficient USDC prior to applying. Upon successful verification of funds, you will directly receive a 100% locked allocation of your subscribed amount.
[ASYN] Listing Announcement	Conclusion The [MPG] STO Strategic Allocation Subscription represents one of the final major opportunities to participate in high-potential digital asset investments in 2025. We encourage you to act promptly and secure your allocation!
Announcement of STO Token Offering – ASYN Public Subscription Allocation Results	INDEXBIT Cryptocurrency Exchange Team
Pre-Issuance Announcement of MPG New Token STO	
New Token Allocation Subscription Launch Announcement	

As shown here, the new week' s official allocation announcement has been released, how should we interpret this allocation? What exactly is being allocated?

Some of us might recall a bit of experience from the ASYN new-coin subscription, but the truth is, many have never truly participated in one before.

Generates something

Now, the subscription phase for MPG has reached its most exciting moment yet, the progress bar has surged past 1900%! And this result, which far exceeds everyone' s expectations, tells us

something important: the certainty and appeal of this new token are drawing in vast amounts of capital from across regions and nations, as panic-driven funds pour in from every corner of the blockchain. This market frenzy has, to a great extent, intensified the dilution of potential allocation ratios.

In some ways, this imbalance is inevitable, driven by the market itself,

a contest of participation that has slipped beyond control.

And yet, even though our Key-Locked Subscription has come to an end, but this kind of participation, defined by certainty and strategic allocation, feels almost like a redemption from above, now arriving right on time!

Amid the massive turbulence, the crypto market has experienced its steepest pullback of this entire rally. The market is now redefining its standards for secure investment. The volatility of currency surfing carries risks far greater than most other approaches, and in contrast, the MPG new-coin subscription stands alone as a 0 risk option, a strategy that lets you advance with confidence or retreat in safety.

Advance: as long as you continue to increase your subscription, you expand your potential allocation and enhance your returns. So far, MPG has proven to be a textbook example of this success.

Defend: all subscribed funds carry no position risk, unlike the volatility of currency surfing. As long as you keep stacking your entries and actively counter the dilution crisis, you can safeguard your potential winning allocation.

Even if your final allocation turns out to be smaller than expected, any unsubscribed capital will be fully refunded to your account.

That is why MPG has sparked such fervor, why it has inspired such obsession. It also confirmed the undeniable fact that the quota-based Key subscriptions would be snapped up in no time!

At this very moment, MPG no longer needs grand words to describe its blueprint. You must understand that its potential 19x profit surge is being driven entirely by the frenzy of market capital pouring in. Take a look at today's subscription progress bar —it is a declaration to every follower who believes in MPG's vision and seeks extraordinary success through it: its value and return will be fully revealed on the day it goes public —at a listing price exceeding 19x the original subscription level.

Just imagine, a 1900% subscription progress means that over \$7 billion in on-chain capital from global participants has already entered this subscription round. And this capital influx alone is what's pushing the expected listing price even higher, a textbook demonstration of demand-side economics.

For comparison, even in the stock market, only companies like Tesla or NVIDIA see daily volumes above \$7 billion.

So, tell me, do you think the heat, focus, and global consensus around MPG are strong enough to capture your heart??

When God closes a door, He opens a window!

MPG is like a treasure chest filled with hidden riches, we simply need to open it. Among those racing for the treasure, members who have already secured the first golden key have won the first stage of victory, successfully locking in their MPG allocation shares.

But the treasure—the potential—is limitless, and no one in their right mind would easily turn away from the explosive profit wave sweeping the market.

To reject profit is to reject a better life, a higher quality of living, and the prosperity of one's family legacy.

*That is why today we must turn our attention to the second golden

key, which has now been launched.*

This is the ultimate version of the MPG key, the master key that opens the entire treasure chest. It represents not only the shareholders' bold counteroffensive, but also the perfect example of striking again while victory is still fresh.

It's all about the MPG allocation, but how should we truly understand the relationship between allocation and public subscription?

Due to the objective effects of dilution, over the past few days we have experienced the intense race to secure limited keys for the fixed-amount MPG subscription .

However, I believe that some members of the Quantitative Winners Legion were still unable to obtain their keys, simply because the keys were extraordinarily scarce.

But that's all right!

*The new MPG allocation round has officially launched this week, as shown in the data chart, what exactly does this allocation phase

mean?*

How is it different from the public subscription?

And most importantly, is the MPG allocation worth participating in?

Will you seize this entirely new strategic allocation opportunity?

As MPG is on track to deliver returns exceeding 20x!

First, let's clarify, what exactly is allocation? You can find an easy answer by looking at how it works in a stock market IPO.

#Allocation refers to the process of distributing a portion of newly issued shares to selected investors during an IPO. These investors are usually institutional investors, such as fund companies, banks, and insurance firms, though a small portion may also go to high-net-worth individual investors.

#In the same way, during an STO in the digital asset world, there is also an allocation phase, in which part of the tokens issued are distributed to specific investors.

That's what allocation means.

#Therefore, the MPG allocation refers to the act of distributing a portion of MPG tokens to specific investors.

Note: these are specific investors, not just anyone.

According to the publicly available data from the exchange, it's clear that 90M MPG tokens are allocated to the public subscription, while 30M MPG tokens are reserved for the private allocation.

Now, do you see what the chart is telling you?

What is the purpose of MPG's new token allocation?

1. To increase the diversity of investors, rather than limiting participation only to individual investors.

2. To ensure that the fundraising target is fully achieved.

3. To enhance market confidence, by bringing in institutional participation, which provides a foundation of secured profits and encourages other large investors to join.

*4. To maintain market stability, since institutional holdings can help

stabilize MPG' s price after listing.*

#Now that we understand what allocation is and what its purpose serves, we can clearly see that MPG' s allocation is fundamentally different from MPG' s public subscription, so what exactly are the differences?

The MPG allocation portion is entirely separate, it is distributed directly to specific investors and does not follow the weighted allocation mechanism used in public subscriptions .

In other words, once you are allocated—you are already confirmed. No need to wait for results.

This makes it clear that:

#Public subscription for MPG is an open participation model, anyone from around the world can subscribe, but the allocation results are not fixed

#Allocation, however, is reserved for selected investors and follows a direct distribution model. Once you' re included in the allocation, it means you' ve already secured your share —a 100% confirmed participation route.

Do you get it now, buddy?

The difference between public subscription and strategic allocation of MPG:

Public subscription:

The offering price and entry threshold are relatively low.

Issue price: 4 USDC. With the minimum subscription of 2500 tokens. In other words, participation starts at 10000 USDC.

Allocation: Allocation price is 6 USDC. With the minimum subscription of 100000 MPG .

Which means participation requires 600k USDC.

Why are the rules set this way?

#First, the allocation price is higher because allocation guarantees direct distribution of MPG shares. There's no waiting, no lottery, once your application is submitted and your funds are verified, your MPG allocation is immediately secured, all that's left is to wait for the listing to realize your locked-in profit.

#Therefore, the price is higher, and naturally, so is the entry threshold.

Think about it, we see this kind of thing all the time in real life.

When you shop at Hermes, you realize that to buy one of their most coveted bags, you first have to reach a minimum spending threshold. Only then do you earn the eligibility to purchase those rare designs.

It's the exact same logic here, do you see it now, folks?

Yes, before your wealth plan becomes reality, there's one thing you need to consider right now: how to participate in the strategic allocation of MPG.

1. The allocation program shows that the final deadline is November 21 (EST).

This means that once the public subscription ends, the MPG allocation will also close.

Time is running out, once you miss it, an opportunity of this quality will not come again.

2. The total allocation quota is only 30M tokens. This portion is distributed directly to selected investors, including institutional capital and high-net-worth individuals (those with a net worth

exceeding \$10M USD).

As a result, competition will be extremely intense.

However, you will participate under the institutional framework of our Quantitative Think Tank Center, which grants you a structured advantage.

So, how should we correctly take part in the MPG allocation?

My Quantitative Think Tank Center is participating in the strategic allocation of MPG as an organized entity, which means that all members of the Quantitative Winners Legion can submit their MPG allocation subscription applications through us.

Simply fill in your intended allocation amount and the timing of your fund deposit.

Once your capital verification is successfully completed, your allocation will be officially approved, guaranteeing that you will receive your MPG distribution.

#No need to worry about dilution, no need to worry about reduced allotments.

#This is a truly risk-free, 100% guaranteed MPG allocation process.

#So today, contact my assistant immediately and follow these steps:

1. Request the subscription form and indicate the amount of MPG you wish to be allocated.
2. Deposit your funds and complete the verification to secure your allocation eligibility.
3. Complete the allocation procedure—your MPG shares will be secured and cannot be taken by others!
4. Wait for MPG' s market debut to realize your locked-in profit advantage.
5. If needed, you may activate the financing guarantee and lending assistance program to help secure your allocation in full!

I hope that this Monday, you seize the moment and take action on the strategic allocation subscription—the single, unparalleled wealth breakout of the entire year, a race at its absolute peak. Good luck, buddy! Tell me your good news this afternoon!

Welcome back to our Quantitative Strategy program, MPG' s determined contenders and champions of certainty!

If the past 2 weeks felt like a stretch of steady, overcast rain, then starting today, we' re officially stepping into what can only be described as "a week of storm-driven panic, carried by thunder and fierce winds"

You' ve probably felt it already:

the sense of panic is rising, spreading, and intensifying at a pace you can practically see happening in real time.

And this time, it' s not driven by rumors or intimidation, but by 3 "genuinely major events" igniting at the same time.

This surge in fear isn' t meaningless "noise", it is a quantitative alarm, signaling the start of a trading week steeped in uncertainty!

The market right now looks very much like an investor being pushed into a corner by four walls:

The Fed's meeting minutes —a "hawkish bomb" that once again poured a bucket of cold water on the market.

The September nonfarm payroll report —the second spark of panic. Delayed by the government shutdown, this long-awaited report is finally returning this week. And it is—
Generates something the "life-or-death data" that will determine whether rate-cut expectations survive.

NVIDIA's earnings —the heartbeat of global technology, the

"engine" driving the world's tech markets. Simply look at how much of the U.S. market's rally has been led by NVIDIA, and you'll understand just how pivotal its earnings report truly is.

This is not fear within a single industry,
this is not fear confined to one sector,
this is a systemic wave of risk aversion.

And systemic panic has only one defining feature: all capital begins to seek the same safe harbor at once.

Where is the "safe harbor" in today's global market?

Where can we find "assets that do not fluctuate with market trends"?

Where can we achieve "stability + predictability + high certainty + freedom from macroeconomic dependence"?

The answer is not in stocks, not in bonds, and certainly not in mainstream crypto.

The answer is: the MPG new token subscription opportunity.

And what are you doing right now?

You're standing inside the MPG subscription process itself,
on the one structure in the entire market least affected by macro
volatility.

Your position is not one of "hedging",
you're positioned in a "confirmed profit pool"

Is it a safe harbor? Not quite, it's safety paired with a pathway to
certainty in profits.

Why is MPG the only asset that can thrive during periods of panic?

There is only one reason, it doesn't depend on macroeconomics, it
runs on supply – demand structure + lock-up speed + dilution
intensity.

It's not the Fed that determines MPG

It's not NVIDIA's earnings report that determines MPG

It's not the nonfarm payroll data that determines MPG

It's not even the U.S. Dollar Index that determines MPG

What determines MPG is only one thing: the inflow speed of on-chain capital;

the number of subscription keys

the dilution curve

the pre-allocation lock-up rate,

the level of participant bidding competition

That's why MPG grows stronger, not weaker, when markets panic.

You are already standing in the safest territory.

While others are desperately searching for a safe haven, you are

already at the very center of it.

While others are chasing certainty, you already possess it.

While others stare at a chaotic market, you are watching the allocation opportunity draw closer.

You've already proven —you are not a follower, but an early strategist.

You are not a panicked trader —you are the one in control of structural profits.

You are not a bystander —you are part of the winning MPG cohort.

Welcome to the most critical and the safest moment of the week—

Welcome to the MPG Safe Zone: the launch week of strategic allocations, and the battle to secure a 100% guaranteed allotment!

The MPG allocation is about to trigger a wealth storm, drawing in institutions and major capital rushing to get onboard.

Amid the rapidly rising subscription progress and growing concern over dilution, the MPG allocation has become the best second golden key!

#Allocation follows a strict "first-come, first-served" principle.

More importantly, the fund verification process, your USDC deposit must be prepared in advance and arrive on time, or you risk losing your advantage.

That's why I believe the Quantitative Think Tank Center's support plan (the guaranteed financing and lending assistance program) will prove essential at this critical juncture. Do you know how to apply and participate?

The first golden key of MPG has been a resounding success, but that was only the beginning. Now your ultimate opportunity—the second golden key, the strategic allocation subscription officially begins! Will you seize it this time?

The second golden key symbolizes the pinnacle of success, only those who truly understand its value dare to act.

The MPG allocation program, with its high-entry exclusivity and 100% guaranteed allocation, has become the first choice for wealth pursuers worldwide.

How many shares you secure this time depends entirely on how swiftly you act now!

Every step in completing your subscription form is a decisive stride toward victory!

The earlier you act, the greater your chance of locking in your place in the circle of wealth. This is not just an opportunity, it is a moment to take control of your destiny!

Seize the second golden key of MPG, and become one of its chosen few.

Your decisiveness and determination will define your path to success

On this particular Monday, I can't help but feel we've been brought back to the early days when we first met and worked together, those years when we poured our energy into investor education. The memories still move me every time I think of them. And clearly, time—our oldest storyteller, it has witnessed countless joys and sorrows, as well as the rise and fall of fortunes.

When you're preparing Christmas gifts, have you noticed that in most families, it's the older members who tend to give the most? Perhaps that's what responsibility looks like. The prosperity of any family rests on the steady, ongoing passing of wisdom, experience, financial support, and so much more to the next generation.

I wonder if you're entering that very phase yourself, becoming, in a

sense, the family's Santa Claus, creating gifts of real substance and lasting value during this very special 2025 season of Thanksgiving + Christmas.

After all, when the outcome of the MPG allocation guarantees a 100% confirmed share distribution, no one in their right mind would miss such an opportunity.

Because every participant across the globe understands that when MPG's capital inflow expands 19x, it's like putting a spoonful of sugar into a small cup, the sweetness is still distinct and pleasant.

But once that same spoonful is stirred into 19 cups, the sweetness, the original plan, dissolves completely, vanishing without a trace.

That's the bittersweet reality, or what we might call a fortunate dilemma, created by the open subscription of MPG.

So does that mean it's useless now? Not at all, its subscription-fund progress bar still carries an almost magnetic profit signal, as powerful and compelling as a sailor's longing for the light of a distant lighthouse.

We need to understand exactly how much capital is driving MPG upward, how much money is chasing it, bidding it up, even to the

point of irrational frenzy!

If your deposit is delayed or your available liquidity is temporarily insufficient during the MPG strategic allocation phase, remember to contact my assistant, she can help arrange a secured financing and lending service for you.

This service is designed to assist you in preparing for our Acumeta Global Conference in Las Vegas, scheduled for mid-December 2025, and to ensure that you secure sufficient allocation in the MPG offering, allowing you to capture this exceptionally lucrative opportunity, as profits are already poised to exceed 20x returns.

Why do I say that the MPG strategic allocation is the safest form of subscription?

#As we all know, whether it was stock IPOs in the past or various digital-asset STO projects, participating in a subscription always came with 2 major concerns:

First, you worried about whether the project could reach 100% of

its subscription progress —the essential requirement for the token to successfully list.

Second, you worried about whether you would receive a higher allocation. Because even if you didn't receive an allotment, your funds were always returned in full, with no loss whatsoever.

That is what we call 0 risk! #And the only approach that truly delivers high returns while maintaining 0 risk is the MPG strategic allocation.

#When it comes to MPG's strategic allocation, it not only achieves 0 risk, but, judging from the current subscription progress, which is approaching 2000%, the listing price is expected to yield a 20x return.

#Therefore, as long as you secure a 100% confirmed allocation share, those 20x profits will naturally flow into your wealth appreciation plan....

#That is precisely the defining advantage of participating in the MPG strategic allocation, once you obtain the allocation qualification, you are guaranteed 100% share distribution, and these shares are never at risk of being seized by others, they are

exclusively yours.

So how should we understand this?

#First, the public subscription portion consists of 90M MPG tokens.

This segment represents the open subscription available to all global digital asset participants.

And at the same time, this data serves as an important indicator—the subscription progress bar reflects the changing pace of capital inflows and serves as a key reference for MPG’s future listing price. Participating in this portion of the subscription carries virtually no entry barrier, all it takes is 10000 USDC.

The only drawback is that excessive enthusiasm and oversubscription can make it harder to secure an allotment in such a highly sought-after project.

In the end, many participants may receive only a very small allocation, resulting in profits that fall short of expectations. So then, what about the MPG allocation?

#The total MPG strategic allocation amounts to 30M tokens, representing a total value of 180M USD (30M x 6)

#A portion of this allocation is directly designated to our Quantitative Think Tank Center, which participates as an institutional investor.

It was through extensive coordination that I secured institutional investor status for our center's participation in the allocation.

Therefore, this segment of the allocation will be jointly subscribed and fulfilled by all members of our Quantitative Winners Legion.

#According to the MSB regulatory framework and the underwriting requirements of the exchange's allocation system, once our Quantitative Think Tank Center participates in the strategic allocation as an institutional investor, if the full amount of the allocation is not successfully subscribed, it could result in the invalidation of previously obtained key subscription quotas and may even impede MPG's successful listing.

So why must I still participate in the MPG strategic allocation

subscription as an institutional investor?

1. To achieve the Acumeta Global Presale Conference target in Las Vegas, it's my responsibility to bring every member of the Quantitative Winners Legion into this competition to secure the extraordinary profit opportunity in MPG. Only when every member gains substantial profit can we ensure the fulfillment of Acumeta's presale order objectives.

2. To drive the Quantitative Think Tank Center's leap in investment growth, which, thanks to the strong support and trust of our members throughout this year, is on the verge of becoming a competitive, brand-driven financial education and technology enterprise.

The crypto exchange, in order to meet the MPG allocation target, naturally seeks such strategic partnerships. That is precisely why the MPG allocation exists.

#Participating in the MPG allocation is a decision that offers nothing but benefits for every member of the Quantitative Winners Legion, because as long as you take part, and you must take part to execute our true winning strategy, you stand to gain.

This is a major allocation event, one of real significance and lasting

impact!

Therefore, this Monday, let us act in the spirit of our shared commitment — with unity, resolve, and meaningful action, and take on this significant subscription allocation together!

Buddies, 2025 is drawing to a close, and your family responsibility outweighs everything else. Be brave and seize this opportunity!

I look forward to hearing even more good news from you. See you on Tuesday!
