

On this Wednesday — a day of intense financial focus — welcome back, MPG winners, the ones standing at the forefront of wealth.

Welcome to our Quantitative Strategy program.

Today ' s financial world feels like a stage where two major detonations went off at the same time:

On one side, NVIDIA' s after-hours earnings report.

On the other, the Fed' s afternoon meeting minutes.

Either event alone would be enough to send global markets into violent swings. Yet today, they arrive together. It feels like two high-speed trains hurtling toward each other on the same track.

Every participant in the market can' t help but hold their breath.

You'll notice it immediately: fund managers are turning cautious, retail investors are growing fearful, the stock market is becoming hypersensitive, and the crypto market increasingly fragile.

It's as if someone pressed a magnify button—every piece of news makes the market jump.

Why?

Because the market is waiting for one thing: a direction — specifically, whether a December rate cut will be confirmed.

Everyone is trying to seize even a sliver of hope, a hint of a signal, a small "directional cue" before the Fed makes its move.

But—you don't need any of that. We don't need any of that. And MPG certainly doesn't.

Listen carefully, this isn't a catchphrase, this is the fundamental difference between structural assets and macro assets.

What is the market right now?

It's a market staring at NVIDIA on one side and the Fed on the other,

and neither is giving a clear answer.

This isn't uncertainty, it's "double uncertainty" — double the confusion, double the fear, double the fragility.

Today's market looks like a driver trapped in heavy fog:

you cannot tell whether to turn left, right, or simply hit the brakes.

And any beam of light may well lead you in the wrong direction.

What you're involved in isn't the stock market, not the broader market, and not the Fed's policy votes.

You're participating in the new-token subscription track.

This is an independent track — independent of macro conditions, independent of earnings reports, independent of interest rates.

What does a new-token subscription truly depend on? Not CPI, not employment data, not bond yields, not rate-cut expectations. It hinges on 3 things:

- ① The project's intrinsic market appeal
- ② Whether its technological vision can generate broad consensus
- ③ Whether capital recognizes its value and is willing to flow in

In other words, while other markets are selling off in fear, the MPG you' re participating in is attracting more capital precisely because of its certainty.

You' re not standing in the storm. You' re standing outside of it, watching others get tossed around by market sentiment, while you remain firmly grounded on the floor of certainty.

You are not participating in a conventional project, you' re part of one of the flagship projects through which blockchain is transforming the real world: MPG

What, in truth, does blockchain change?

Blockchain is reshaping "structural logic" itself. And what are the

problems of the traditional world?

Centralization, fragility, inefficiency, and a lack of transparency.

Real-world examples are everywhere:

Multiple U.S. government shutdowns

Bank cards being frozen

Exchanges going offline

Cloudflare's global outages

Major shutdowns at Meta, Google, and AWS

Banks facing capital shortages

Financial crises erupting when centralized chains break down

Have any of these problems been truly solved? No.

Why? Because at their core, they are inherent flaws of centralization

Blockchain's decentralized architecture does not go offline, does not collapse at a single weak point, and does not allow power to be concentrated in the hands of a gatekeeper. As long as the network is running, the project keeps running.

And MPG is built precisely on this architectural advantage, a profit

mechanism that operates independently of market cycles.

NVIDIA' s earnings can shake the U.S. equity markets, and the Fed' s minutes can rattle the entire financial world, but none of that can change MPG' s profit model.

Because MPG' s returns don' t come from macro conditions. They come from the chain itself, from supply and demand, from the dilution curve, from subscription competition.

Why is new-token subscription inherently resilient?

Because it operates within a closed internal supply – demand system.

As long as participation keeps growing and dilution continues to intensify, your profit outlook rises accordingly.

What you see in today' s markets is merely noise—

Nvidia' s earnings: noise.

The Fed's minutes: noise.

Generates something
Rate-cut speculation: noise.

After-hours volatility: still noise.

Many people are rattled by this noise, flinching like startled birds.

But what is your track today?

It's called the MPG new-token subscription.

It's called the strategic allocation countdown.

You're standing at a doorway to wealth that doesn't hinge on macro conditions, but on capability, and on action.

Folks, welcome to a window reserved for those with the courage to seize it.

A window that belongs to MPG,
and to you.

I ' m certain that we can all clearly see 2 visualized progress indicators:

First: The MPG public subscription progress chart shows that digital-asset participants from countries and regions across the world are continuing to pour attention into MPG ' s explosive profit potential. This is the result of profitability that attracts on its own, a momentum driven by the magnetic pull of FOMO.

#At the same time, this data also gives us a forward-looking indication of MPG ' s potential listing price — allowing us to estimate the returns we may achieve from our allocated shares. It provides guidance ahead of time, so we can understand what our eventual gains may look like.

Can you see the picture more clearly now?

Second: MPG ' s strategic allocation metrics conveys 2 important signals:

2.1 Every unit of completed allotment reinforces the validity of the earlier key-subscription lock-ins. It ensures a smooth, successful listing for MPG.

The two are tightly interconnected — a relationship where shared success lifts everyone, and any setback affects all.

2.2 It is, quite plainly, the finest moment for wealth redistribution, a rare inflection point for upward mobility and the establishment of enduring family prosperity. And there is no better time than the present MPG allocation window.

The continuous pursuit of wealth appreciation isn't just about enjoying life, it is a form of stable, enduring family honor, and the most reliable shield against long-term volatility.

So why shouldn't we go ALL IN on the MPG allocation?

Why not? More allocation means more profit, so why not?

Thanksgiving's grand celebrations are just around the corner, and the season of holiday shopping frenzy is fast approaching!

We don't need to dwell on what 2025 may have taken from us, nor should we become complacent about what we've achieved in the past.

In moments like this, you begin to realize just how essential family prosperity and legacy truly are, and how cherished, how enviable,

the warmth and love of being surrounded by those you call family can be.

I think it's time to pause for a moment and consider what kind of life you want to bring to your family in 2026, or what higher quality of future you hope to shape. Will your children and grandchildren benefit from your wealth appreciation through better opportunities, perhaps in their education?

Sometimes you need to pause and give yourself the space to find a clearer answer. And while I know the MPG allocation has already surpassed 50% completion, remember this: the members who submitted their allocation forms last Friday and finalized their deposits have already secured more than half of the available MPG allocation.

Those 15M tokens already have owners.

Yes, every bit of it comes from the swift action of winners.

If you slow down, you may miss this golden window of allocation entirely.

So think about it, are your on-chain holdings truly as strong as they ought to be at this stage?

From learning how subscriptions work to actively participating in the ASYN offering, we've gained the confidence and conviction needed to complete an entire cycle of new-token issuance and subscription investment.

And today, we've arrived at a critical moment — the 48-hour countdown for the MPG strategic allocation.

With the subscription progress now nearing 2100%, more than \$8 billion has poured into the public subscription race, sharply diluting the likelihood of obtaining an allocation there.

If you've already participated, then all you need to do now is wait for the allocation results to come out, and see whether luck is on your side!

#If you haven't participated yet, you're actually the lucky one, because you still have the chance to receive far better treatment by entering directly through the MPG strategic allocation. And there's no need to worry about it, once the allocation is approved, your shares are guaranteed.

It's like holding a golden key, one that opens the door to an entire world of wealth!

Of course, a few senior members have asked why I'm urging everyone to take part in the MPG strategic allocation.

And yes, that is an excellent question.

#As the founder of the Quantitative Think Tank Center, allow me to offer the most candid answer:

Because the success of Acumeta's global launch event in Las Vegas depends on it. Yes, it really is that simple.

#I understand one thing profoundly: Acumeta's launch in mid-December 2025 will succeed only if our entire community stands with us — attending in person, demonstrating genuine commitment, supporting the release with real capital, and placing pre-orders.

#So why wouldn't I bring you with me to secure this success together?

Only when you go ALL IN on the MPG allocation — securing a full position and receiving your full allocation — can you lock in the kind of extraordinary returns that exceed 20x your capital.

#So why wouldn't I urge you to take part?

Even though the Acumeta pre-sale pricing is high, your MPG profits will be more than enough to cover the cost. As long as you follow through with the allocation now, you won't be left behind. You deserve Acumeta, and you're about to become its rightful owner. You'll receive an invitation next week to attend the event.

Get in touch with my assistant, this is the best time to do it!

Why does completing the MPG strategic allocation help ensure a smoother and more successful listing?

Back when we first studied new-token STO issuance and subscription, I explained this clearly.

A new token functions much like a newly issued stock: a token follows the STO model, while a stock follows the IPO model.

And of course, whether a new token launches through a public subscription + strategic allocation structure, or through public

subscription alone, must be reviewed and approved by the MSB.

#Regardless of which path is used, one rule never changes: every token must be fully subscribed, with each token matched to its corresponding value.

Only then can the listing proceed smoothly and successfully.

#That ' s why MPG has become so explosive, drawing unprecedented enthusiasm in the public subscription phase. And this is precisely why I prioritize and ask the members of the Quantitative Winners Legion to complete the MPG allocation.

#Because you ' ve supported me, followed my guidance, and stand with me in a long-term partnership. This is shared benefit, shared success, and that ' s why I ' m confident you ' ll complete the task I ' ve entrusted to you.

Prepare your capital, whether from cash reserves, secured financing, or through the Quantitative Think Tank Center ' s guaranteed lending program.

All it takes is 2 days, and 2 days from now, we' ll witness the miracle of success together!

You must understand it clearly, as the institutional investor behind the Quantitative Think Tank Center, I am pledging the entirety of our token assets and our brand reputation as a guarantee for my members.

It is a remarkable act of trust, and a testament to the deep confidence placed in you!

#I simply want you to put your borrowed capital to use swiftly and complete the MPG strategic allocation. For it is only by securing those allocated tokens that you can realize the exceptional, more than 22x returns once MPG goes public.

#Only then will you have the additional capital to place your pre-order for Acumeta — a high-quality investment choice that allows everyone involved to win.

#For the specific amount of guaranteed financing you may qualify for, contact my assistant, who will guide you through every step!

I hope you secure a higher financing limit, and with it, a larger share of the MPG allocation!

MPG ' s second golden key is now coming into play — another outstanding opportunity for you to advance!

At the moment, the public subscription data for MPG is showing staggering numbers —an investment return exceeding 22x.

With returns of this scale, every subscription application becomes exceptionally valuable.

This is more than a financial opportunity —it is a moment that calls for courage and foresight. My best wishes for your success. We ' ll continue our conversation this afternoon!

Happy Wednesday, magnificent MPG victors:

While Wall Street and the entire world waits for a clear, unified signal, what is it that we actually hear?

We heard confusion! We heard an official endorsement of uncertainty!

Welcome to the most pivotal episode of this week's «Quantitative Strategy Program», where a powerful sentiment is spreading through the global investment landscape: "exhaustion with uncertainty"

Chairman Powell himself acknowledged the truth: "There are deep divisions within the Committee."

Why is this happening? Because the government shutdown in October left everyone without an official data anchor. And it pushed the October non-farm payroll report all the way to December 16, deepening the data vacuum.

With no complete data to rely on, the Fed has been forced to depend on substitutes: partial indicators, blurry signals, and private-sector forecasting models to gauge the direction of the economy.

In other words, the world's largest economic authority, the institution that steers global monetary policy, is now feeling its way forward in the dark.

What does such a statement mean for the market? It means the Fed's internal "confidence system" is starting to fracture. And the market's confidence is falling with it.

Over the past year, what has the market relied on most?

Not the economy itself, but the Fed's "attitude"

Markets have not been following the data, they have been following

the "tone." But now, with visible divisions inside the Fed itself, the entire market suddenly finds itself without a center of gravity.

Today, the market is not dealing with "risk", it is dealing with "chaos"

A future that is impossible to read: unclear, uncertain, and opaque.

And this is why you are seeing:

Institutions are cutting their positions,
fund managers locking in profits,
major assets weakening,
crypto volatility expanding,
stocks pulling back again and again,
investors exhausted by the endless flip-flop between "hawkish" and "dovish" signals.

The market is tired. Not tired of losing money, tired of uncertainty.

Generates something

"Uncertainty devours every asset"

And so capital begins to retreat—out of equities, out of tech stocks, out of high-beta sectors —and starts searching for an asset that is independent of the Fed, independent of data, and independent of macroeconomic chaos.

This is why, at the very moment others are exhausted by the market's uncertainty, you are advancing steadily through MPG's strategic allocation. Because what you've chosen is certainty.

MPG's profit engine grows independently, driven by:

the number of on-chain participants,
the strength of key-quota locking,
the pace of dilution,
the intensity of market competition,
and the allocation weight.

These are "on-chain factors", not "macro factors"

And that's why you can remain steady today, because you're standing on a track that doesn't follow market sentiment, but follows competition and supply-and-demand.

Let's draw a simple comparison:

If you are holding stocks today:

A single sentence from the Fed → market cap evaporates

NVIDIA posts a weak earnings report → the entire tech sector falls

Employment data comes in cold → market panic doubles

A shift in rate expectations → 3 days erase 2 weeks of gains.

If you're holding major crypto:

Equity volatility → they fall with it

Market pullbacks → they fall

Risk sentiment rises → they fall

If you're holding an MPG allocation right:

The more chaotic the market becomes → the more people rush into subscriptions

The more stocks fall → the more crypto capital shifts toward new tokens

The worse the sentiment → the stronger the dilution → the larger the profits

The murkier the rate outlook—> the more people pursue structural certainty

Do you see it? When the market enters an "era with no direction," only structural profit has direction.

This isn't theory, it's reality.

Today, the Fed admits to internal division; the market admits to confusion; investors admit to exhaustion; but you don't need to admit to any fear.

Because you're standing in the MPG track — a track that is independent, clear, directional, built on real supply and demand, reinforced by competition, and positioned for the strongest upside of the year.

Welcome to the golden 36-hour countdown window reserved for MPG's winners.

And what is wealth redistribution, in simple terms?

It's moving money out of one set of pockets and into another.

Imagine a classroom where students score differently on a test, some do very well, others not as well.

The top performers receive more rewards, while those with lower scores receive less.

But if the school feels the gap is too wide, too unfair, it may take a portion of the rewards from the high-scoring students and redistribute them to the lower-scoring ones. That is a simple example of wealth redistribution.

Wealth redistribution aims to make society fairer and more balanced, giving everyone a better chance at a decent life.

Wealth redistribution can be understood this way: wealth is not static —it moves.

As society operates, wealth flows from some hands to others.

This transfer can happen through market transactions, tax policies, donations, or through circumstances no one foresaw.

The essential point is that redistribution is not simply about winning or losing, it is the "movement of opportunity" itself.

Its deeper meaning: wealth redistribution exists to make a society, or a community more stable and more prosperous.

It's not about "taking from the rich to give to the poor," but about helping the entire economic ecosystem function more healthily. And when wealth begins to move, opportunities expand, and in the end, everyone benefits.

MPG's model of wealth redistribution is nothing less than a new revolution in on-chain assets, a new path to victory, an opportunity by design, a rare and valuable token issuance, and a wealth effect born from practical, real-world applications of virtual reality.

It is the triumph of your vision and your ability to make the right decision.

And if you miss the moment to take the right action, you miss the abundance that follows.

As the chart illustrates, the global rush to subscribe to MPG continues with remarkable intensity. Even today, capital from across continents is still pouring in, what kind of obsession is this? It's a buying frenzy beyond anything you or I could have imagined!

A wave driven by the absolute determination of a countdown that must end in victory!

My goodness, MPG is surging with such overwhelming buying pressure that it has blasted through the 2200% subscription mark, signaling that more than \$8 billion has now poured into the rush, driven by the sheer enthusiasm of on-chain capital. MPG has officially entered its 22x profit phase, isn't that, in every sense, a remarkable and exhilarating Thanksgiving gift?

The chase for MPG has already turned into a thrilling do-or-die showdown.

Just as Rivers clinched a game-winning layup in a classic Lakers showdown, here too, speed is the lifeblood of victory.

Only those who move quickly and prepare fully can gain the advantage in a competition this intense.

At this moment, the financing and lending support program has become a crucial secret weapon —offering timely support to those bold enough to act.

This is not just an opportunity, it is your full-speed sprint toward the summit of wealth!

Seize this chance and let MPG become the catalyst for writing your own epic chapter of wealth creation.

The miracle of Christmas is right before you, and this isn't just a contest, it's your buzzer-beater victory.

Let your actions speak for you, and carve out an entirely new path to success!

This kind of FOMO, this sheer urge to buy, cannot be stopped. Under the guidance of crypto technology and the ethos of decentralization, an MPG listing with a 22x return will only draw even more capital into the market afterward.

Given that, what does this mean for us — the members who are already in the game, those who have secured the [Key Quota • Green Channel Lock-In] subscription plan? How will we be affected?

If we think this through carefully, it's not hard to see that the targeted key-quota allocations are also matched and distributed out

of the 90 million MPG in the public subscription pool. With more than \$8 billion already chasing this, and a very real chance of the total pushing past \$10 billion or even \$11 billion, a new concern naturally arises: will the Key-Lock Subscription start to lose some of its effectiveness?

The answer is yes, it definitely will.

I can't specify the exact percentage, but the impact is inevitable. For the precise figures, please contact my assistant to review your Key-Lock subscription allocation status so we can prepare the best defense strategy together.

So how do we mount an effective defense of our Key-Lock allocations in this new stage?

It comes from the second golden key, the key that opens the next gateway to MPG's wealth winners!

Choose strategic allocation, because only the allocation route guarantees a 100% confirmed allotment, completely immune to dilution of any kind!

Here is why:

1. The MPG allocation is drawn from a distinct tranche — the 30M allocation segment, which is entirely separate from the 90M public subscription segment.

It functions as an additional, independent channel.

2. The allocation subscription method provides certainty.

Your subscription form guarantees your eligibility, allowing you to secure 100% of your allocation.

3. Once your allocation funds are verified, your Key-Lock Protection becomes fully activated — officially safeguarding your rightful share of the distribution.

4. Because the threshold for allocation is higher and the permissions are stronger, your rights and protection receive an additional layer of reinforcement.

This ensures that, in the end, MPG becomes exactly what you intended it to be: your winning mechanism for capturing success.

When you decide to go ALL IN, the world clears a path for you. This is the safest way to win — with your own capital casting the vote.

And even if you choose to move forward through financing/

borrowing, it is a commitment worth making.

After all, MPG is an unbeatable contest — the winners sit at the feast, and those who fall short simply step aside in silence.

And in 2025, I believe neither you nor I will be on the losing side, we're fighting for a stronger position, aren't we, buddy?

Share your updates with me on Thursday — I'll be waiting for morning's first light, hoping it brings your exciting message with it!

Until then!
